THE SQUAD IS YOUR

Chaos has erupted throughout the galaxy. As leader of an elite squad of Republic Commandos, your mission is to infiltrate, dominate, and ultimately, annihilate the enemy. Your squad will follow your orders and your lead, working together as a team – instinctively, intelligently, instantly. You are their leader. They are your weapon.

A dynamic, action-packed illustration of Republic Commandos in a dark, industrial environment. The central figure is a Commando in white armor with red and blue markings, holding a blaster. Other Commandos are visible in the background, some firing weapons. The scene is filled with smoke, debris, and bright light effects from the weapons.

STAR WARS
REPUBLIC
COMMANDO™

A dramatic, high-contrast image of a destroyed building. A bright blue light source, possibly a fire or explosion, is visible through a large opening in the structure. Debris is scattered around the base of the building. The word "WEAPON" is written in large, glowing blue letters at the top of the image.

— GameInformer Online

With intuitive and smart squad commands, the simple touch of one button easily controls your squad to perform complex commands and strategic maneuvers.

With a dozen weapons to choose from, battle a variety of highly intelligent and deadly enemies - from brutal Trandoshan mercenaries to the flying insectoid warriors of Geonosis.

Play over 15 levels of 8 varied alien environments for a selection of unique single/multiplayer modes.

Encounter new vehicles, locations and enemies from the upcoming film.

MARCH 2005 ISSUE #249

22 Editorial

There were tons of good PC games this year. Not that we're complaining.

24 Letters

Thanks to our faithful readers, we are no longer considering killing our Letters section, though killing the editor is still up for consideration.

32 Radar

Coming soonish to an arcade near you: a coin-op version of Vivendi's *Half-Life 2*! And coming nowish, PC gaming...in glorious, '80s-style 3D! For all the *Halo* and *Stubbs the Zombie* fans out there, we've also got an in-depth AIM Game chat with Bungie founder and current Wideload Games head honcho Alex Seropian. Sweet!

44 Previews

This month, feast your eyes on Tim Schafer's psychedel.c adventure *Psychonauts*, as well as Atari's upcoming time-bending FPS, *TimeShift*. We've also got details on *Act of War: Direct Action*, hands-on multiplayer impressions of *Battlefield 2*, and the sweetest *Doom 3*: *Resurrection of Evil*. Loading shot over!

GAME OF THE YEAR AWARDS

■ COVER STORY

2004 was a monumental year for PC gaming, and it's once again time for us to give credit where credit is due in our annual Game of the Year awards. Which games walked away with top honors this time around? Not *Leisure Suit Larry* or *Catwoman*, that's for sure.

56

44

70 Reviews

Finally, the game you've all been waiting on the edge of your seats for: *Alexander*. And if that doesn't get you excited, we've also got *The Chronicles of Riddick* and *Prince of Persia: Warrior Within*.

78 Tech

Our Tech Commando goes deep into the trenches with Nvidia's new GeForce Go 6800 portable videocard and rounds things out with a look at several wireless routers.

93 Check Out

Tune in to Check Out, where we've got some killer **Kohan II** strategies, as well as another chapter in the popular ongoing **Chronicles of Egbert**. And of course, we've got more solid A-List recommendations and another awesome Killer Rig.

104 Tom vs. Bruce

Arr, mates! Tom 'n' Bruce be sailin' the seven seas and drinkin' barrels o' tasty grog with **Sid Meier's Pirates!** Which one o' these landlubbers will walk the plank?

108 Scorched Earth

Robert attempts the impossible in his search for inner peace.

THIS MONTH ON 1UP.COM

CGW.1UP.COM

It seems that **Playboy: The Mansion** got a big head start on the ratings at 1UP, even weeks before its actual release. We'll

see how it measures up, especially against such big titles as **Half-Life 2**, **World of Warcraft**, and **Doom 3**.

CGW_GIZMO.1UP.COM

We apologize for the inconvenience, dear readers, but for the next three months, the only picture you are going to see here is this. Like

everyone else at this so-called magazine, Darren needs a good prod-ding in order to get his work done... or to update his blog more than twice a decade. So if you tire of this picture, visit this slacker's webpage and tell him to get to work!

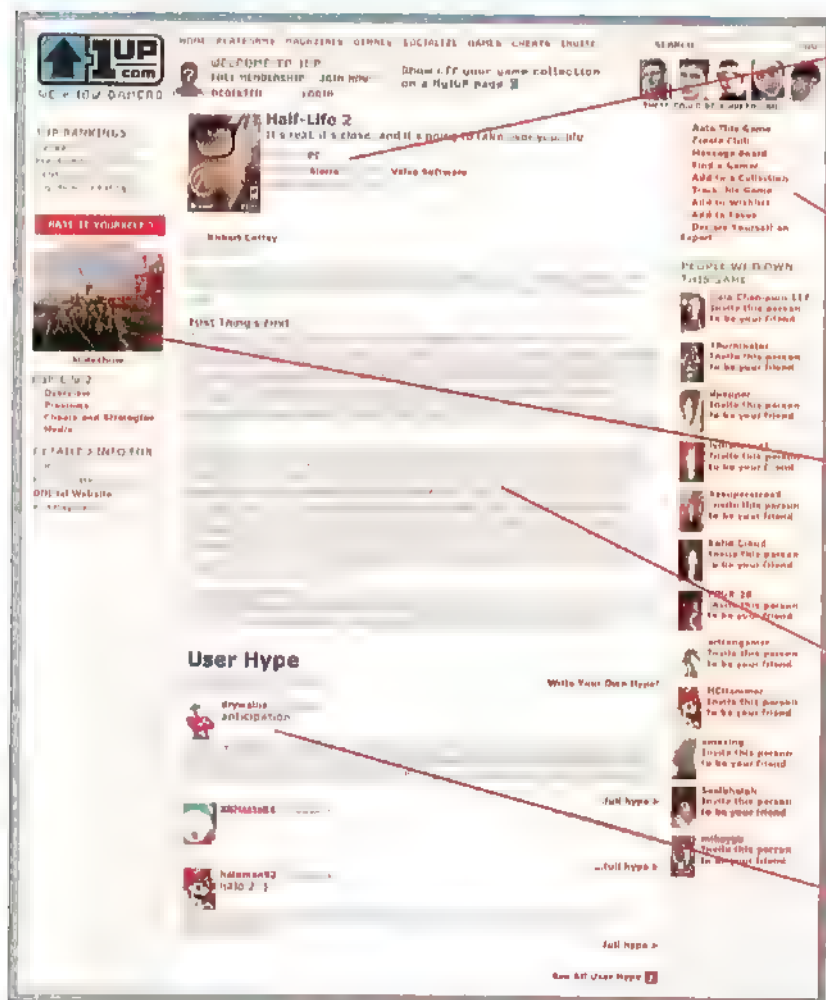

BOARDS.1UP.COM

No one can be self-deprecating and self-defacing all the time. In light of that fact, Jeff kindly created the perfect club, **CGW Sucks!**, for all of you out there dedicated to helping us in those trying times when our self-esteem is dangerously high. So please, drop on by, even if it's only with a one-liner, and save us from ourselves. If your funny meter is running low, you can always go with a classic and pick on Jeff for his thumbs-up pictures.

Get the most out of 1UP.com!

It's where gamers who live to play get what they need to succeed: The best news, reviews, previews, screen shots and cheats. Plus, on 1UP you can build your own community of gamers to share tips, tactics and even success stories.

Letters

All you do to me is talk talk

DUH NUH NUH NUH NUH NUH!

My friend and I were arguing, but we agreed that Jeff Green is George Clooney sexy, Michael Jennings is Michael Keaton sexy, Darren Gladstone is Val Kilmer sexy, and Robert Coffey is Adam West sexy. Ryan Scott isn't sexy; he just reminds me of a geekier Ken Jennings

Chris "The One" Davidson

FWIW, Robert believes he's more of a Christian Bale. But from a different movie.

YOU LIKE US! YOU REALLY LIKE US!

I've been reading CGW for the last six months now, and I have to say that the overall quality and hard work put into the magazine is impressive. You guys always have the information that I am looking for and always have good coverage on new games and gaming forums (which is where the Canadian PC game mags just don't cut it for me). The issue that solidified my overall impression was the January 2005 issue, which gives valuable information on 102 free games, some of which are PC classics. I have to hand it to you guys at CGW—you do your research pretty well because I have been looking for some of those games for a little while now, and you guys made my job a little bit easier. Thanks a lot and, well, as I would say to fellow gamers for the holidays: Good food, good beer, good God, let's play, eh!

Josh Bauder

REALITY BITES

Robert Coffey isn't the only one who's forgotten where the line is between games and reality (Scorched Earth, Holiday 2004). During a long *Thief 2* session, I had been making good use of Garrett's mechanical telescoping eye. Then I went to the mall. Spying some thing in the distance, I twitched the right side of my face, searching for the muscle that would make my eye zoom in. Then I remembered that my two dumb organic eyes don't have that function. Darn. But it's nice to know I'm not the only one to have a moment like this, even if my only company is Mr. Coffey

LarryFromMadrid

Wolf in Sheep's Clothing

Recently, I got into *World of Warcraft*, picking a PVP server as home to my level 21 undead mage Bernie. The only problem is that a level 21 mage gets slashed down in three hits when he's in contested territory where level 40 human warriors ride by on their horses and attack him. But I found a way to get back at them. I call it the Art of Sheeping. You see, one day I was running away from a level 35 warrior (as I normally do), and in my last moment of desperation I cast polymorph, promptly turning the dwarf into a sheep for 30 seconds. I was amazed that a relatively low-level player like me could get away with that. That's when the mass sheepings began. I even got an entire group killed because of one measly sheeping. As they were running by, I managed to sheep the straggler in the group, and they promptly all turned around to annihilate me. I ran into Tarren Mill to escape when one of them shot me with an arrow—which got the attention of the level 50 deathguards and several high-level players inside the city—the entire group of six people was slain because of one level 21 mage who can't keep his finger off the polymorph spell. I also managed to sheep a certain level 38 dwarf paladin no less than four times. Bernie is no doubt a household name in alliance territory. Imagine six dwarves gathering around the table planning their attack on horde players, when all of a sudden one of them types, "What about Bernie?" Silence falls over the group as they make plans about how to dispose of the low-level mage who won't think twice about sheeping the hell out of them. Bernard Mantooth

We've gotten a number of responses to that column and all we can say is, for the love of God, go outside and find out what it's like to kiss a girl. That goes for you too, Robert.

FUN—NOW EVEN MORE ENJOYABLE

I just got around to reading *Scorched Earth* from the December issue and can

say that you are 100 percent correct. The whole point of gaming is to have fun. I like a little unrealistic escapism after a hard day at work. And guess what...if I don't care for a particular game, I don't bitch about it, I just don't buy it. Simple as that. Tell those folks around your office to try to not analyze things too much...just try and enjoy them

Matt

INTEGRITY IS JOB ONE

As a longtime reader of CGW (since about 1992), I wanted to write in and second your concerns about "exclusive first reviews"—probably the worst trend I've seen since I started gaming. I have now canceled my subscription to your main competitor because I got fed up with month after month of whitewashes in which the review

conditions were clearly favorable to the game developer. However, I was disappointed by your decision to go along with the terms for *Doom 3*—playing a game under ideal conditions on a machine preselected by the developer hardly simulates the conditions a gamer would face. I didn't feel I could trust your review because I don't have the kind of screamer that you undoubtedly played the game on. I still like your magazine (particularly Tom vs. Bruce and Rob Coffey's column) but urge you to stick to your principles and not get further into this early review business. It's only a matter of time before another *Black & White* comes along and embarrasses everyone who rushes out a review without taking the time to see how it plays over the long haul.

Aaron McPherson

FANTASY FULFILLED

Oh my God! I could not believe the whining over the new *Playboy* game. Porn may not make for the highest form of

gaming out there, but *Playboy Magazine* is one of the great things about America. Games take players to a realm of fantasy, whether that be spilling the blood of Nazis, slaying dragons, or chillin' at the Playboy Mansion. If you do not realize this as a gamer, then you have missed the point. Also, the days of a limited game selection are over. Why whine about a new *Playboy* game when there are so many games out there to play? One of my longtime dreams has been to hang out at Hef's and enjoy the scenery. With the new game, my dreams become a bit more real. I'm thankful for the new game. I'm thankful for any new game that is based on something I consider cool. Instead of griping about games based on the porn industry, why don't these gamers come up with some new groundbreaking ideas to help move computer games to even bigger horizons?

We're right there with you, J. When else are the great unwashed gamer hordes going to get to hang at the grotto? Our motto: If it's good enough for Mini-Me, it's good enough for us.

NICE TRY!

I have tried numerous times to write a letter that would meet your standards and be published in your magazine. Seeing as none of my letters have yet been published, I've decided to do what all the other successful idiots do—

Let's stop right there. Where do you get off referring to our readers as "successful idiots"? Please. In all likelihood, they are just like us—unsuccessful idiots. Get the basics right and then, maybe, we'll publish your letter.

WTF?

What, or who, is flying in the background of the *Matrix Online* ad?

Cole

Those are some incredibly astute peepers you've got there, Cole. We asked Monolith if it could shed some more light on that almost-invisible figure, and it sent us this shot of a previously unrevealed new character class.

Makin' that 104

I just read your article in the January 2005 issue of CGW about the best 102 free games available on the Web... and I was sorely disappointed. You left off two of the greatest games in existence—*Soldat*, a 2D shooter that's free to try out, and *Forgotten Hope*, a massive mod for *Battlefield 1942*. Missing *Soldat* is all right, I guess, but I just don't see how you guys can overlook *Forgotten Hope*. I pity you if you have not yet experienced *FH* in all its 1.7-and-some-odd-gigabyte glory.

Austin

Consider our readers duly alerted, Austin. Thanks for the tip—if anyone else has some good free game suggestions, please send them our way.

Ye Olde Mailbag

Here at CGW, we believe in free speech—which pretty much explains our paychecks. If you'd like to join in, send us your pithy observations, urbane witticisms, sly compliments, and unhinged ranting to cgwletters@ziffdavis.com. Operators are standing by.

Robert Coffey (and everyone else who works at CGW), thank you for being heroes to all of us kids out here in need of heroes. You truly are champions of light in dark times.

The man behind Stubbs and Zorro and Teenage Studios talks all about his life after Bungie—and what's next

Soul Calibur. Street Fighter. Half-Life 2? Later this year, don't be surprised to see a cabinet holding Valve's newest first-person shooter sitting shoulder to shoulder with classic arcade staples. Valve has announced a partnership with Japanese arcade developer Taito to create an arcade version of Gordon Freeman's adventures in City 17, scheduled for a summer release in Japan. Taito, usually involved with only Japanese developers, met Valve through a mutual associate. "A friend at Softimage introduced us earlier this year [in 2004]," says Doug Lombardi, director of marketing at Valve. "They'd heard about *Half-Life 2* and had some ideas for an arcade version they wanted to discuss with us."

PUTTING THE PC IN ARCADES

According to Taito, however, discussions between the companies are nothing new. "We have been communicating with Valve for technology exchanges before," says Takashi Naito, general manager of Taito's AM development department. "Taito was interested in increasing the lineup of gun games and the right timing had come."

The idea to convert *Half-Life 2* to an arcade format followed the announcement of Taito's Type X arcade hardware, constructed entirely of ordinary PC components. Valve is the first American company to announce support for the Type X, but the idea of tackling arcade development with PC parts is old news: Microsoft's Chinro, UltraCade's Graphite, TLC's FlexArcade, and others have already been there, done that.

This isn't the first time Valve has been involved in arcades, either. Namco has been distributing an arcade version of *Counter-Strike*, dubbed *Counter-Strike Neo*, in Japan since the end of 2003 on its N2 platform, hardware very much like Type X. "[We] expected, when rumors started of *Half-Life 2* arcade, to see a Namco announcement," says Kevin Williams, editor of *The Stinger Report*, an international online trade publication covering arcade amusement. "The Taito announcement caught all of us by surprise and has instigated an inquiry into why Namco and Valve have fallen out."

Valve declined to comment on the subject, and Namco was unavailable as of press time, but due to Taito's limited reach in outside markets, if and when *Half-Life 2*'s arcade release spreads, "do not be surprised if in America, Taito actually uses Namco America to distribute the final system," says Williams.

IF YOU BUILD IT, WILL THEY COME?

For the moment, Taito's plans for *Half-Life 2* in arcades don't include distribution outside Japan, though it expects that to change. A Japanese focus is an interesting choice, considering the market's

How much would you be willing to pay to get your *Half-Life 2* fix?

Nope, we doubt that there will be keyboard/mouse setups in arcades to play FPS games.

With our luck, the arcade machines will need to log on to Steam as well in order to play. Sigh.

"Traditionally, FPS games have had somewhat of a low profile in Japan—unlike the rest of the Asian market, where they are very popular." —Doug Lombardi, director of marketing at Valve

general aversion to the genre, Taito doesn't see the market as bleakly. "We do not think first-person shooters are unpopular in Japan," says Naito. "There might not be enough interfaces which players can enjoy yet." How that interface is different in *Half-Life 2* is unknown, but Valve admits the transition from PC to arcade makes a difference—"PC users will be playing a very different version [of *Half-Life 2*]," says Lombardi. Taito has not detailed in-game changes or specifics about the cabinet's control style. Williams predicts an altered version of Taito's *Zoids Infinity* cabinet, a mech game operated with a dual-stick scheme, may be used with Taito's announced modifications, such as a widescreen monitor and 5.1 Dolby Digital Surround Sound. Just don't expect a keyboard and mouse.

Even though the first-person shooter's acceptance is higher in the United States,

American arcades have been in steep decline for years, which supports Taito's logic of a Japanese debut. "The U.S. market is only now struggling out of a deep hole and from a position of weakness, [and therefore the game] would not be best suited by an initial U.S. release," says Williams.

If the arcade version of *Half-Life 2* appears in the United States as Taito hopes, though, Valve's baby won't face a market dominated by Japanese games alone. Electronic Arts, LucasArts, and Microsoft, companies with little arcade experience, are dipping into the recuperating market. "We hope this machine will become the opportunity for [the] revitalization of [the] arcade industry," says Naito.

If there ever was a game to hook Japanese gamers on the first-person shooter, *Half-Life 2* is it. This summer, Valve, Taito, and the industry will find out if their lure is strong enough. **Patrick Klepek**

FIELD TEST

The Eyes (Kinda) Have It

New glasses take 3D to new dimensions

The whole idea of playing games in 3D is nothing new. That's why we keep getting suckered into buying new graphics cards every year. But actually seeing games in 3D? That kind of crazy talk earns you cock-eyed looks in this office. After all, past experiences haven't been that hot. ELSA had wired glasses that kept you tethered to your old Nvidia-card-based PC with mixed results a couple years back. And Sharp's 3D LCD technology is both interesting and vomit inducing at the same time. EDimensional, in the meantime, has been quietly working away on its fourth generation of wireless 3D-glasses technology for monitors (E-D glasses, \$99; www.edimensional.com). Games that already have some degree of 3D suddenly have a lot more depth.

EYEBALLING THE TECHNOLOGY

The good news is that the 3D technology is now card agnostic. First, plug the middleware box into your ATI or Nvidia graphics card, then attach the other end to your monitor. Align the IR receiver on top of your monitor, and you're good to go. The drivers that reside in the background kick on in-game, and the real shock here is that the unit actually worked in some of our tests.

The cluttered, cramped corridors of *Doom 3* seemed a little more ominous—and less sharp. But for the extra 3D effect, we can sacrifice some screen quality. A game that really benefited was *LOTR: The Battle for Middle-earth*. The "living world" map that is one of the centerpieces of the game looked simply amazing. Mount Doom and the

various towers popped out of the screen while the HUD floated above. We were anxious to see similar results with *Half-Life 2*, but nothing happened. Huh? Nathan Newman of EDimensional explained that drivers may need some tweaking when working with new games with proprietary engines. "But we have really quick response times from customer feedback," he adds. A lack of source-engine support is pretty notable, but to emphasize how quickly the drivers get updated, a working version arrived days later. If you have a CRT or LCD monitor with high refresh rates, this system could be worth checking out if you're jonesing to eke a little more out of your gaming experience. Just don't expect to look cool while you're doing it. **Darren Gladstone**

DUMPSTER DIVER

Digging up gold in the bargain bins

The first time I saw a pile of cash, it was with the aim of a sharp general crowd. Heck, my entire weekend plotting the demise of Eastern Europe had been in the day, which leads us to ask: Why is the PC game so off? There's no need to blow \$100 bucks on this old when you can get a better World War II fix: sew the Codename: Panzers Phase One. Or, if you're a history buff, then make your own in Rise of Nations. Or grab a buddy, some beers, and a board game and yell out: "Battleship!"

CODENAME PANZERS PHASE ONE \$16

RISE OF NATIONS \$19

AXIS & ALLIES \$50

■ SUPER

Contest Time

We got ourselves a winner

 A call was sent out across the land for a hero. What we wound up with was a bunch of e-mail from CGW readers who at one point or another tried jumping off a roof, thinking they were supermen. Only one lucky random reader, though, earned himself a limited-edition *City of Heroes* cape (only 100 were made) and a free 60-day game card. Alex Cambier, please step forward.

That's right, people; he doesn't need to

give himself some fancy hero name. All he needs to do is strap on his "getting in the game hat," (a goofy plastic Viking helmet) and shout out the occasional battle cry when playing his 60 free days of *City of Heroes*. And, because he's a teenager who can't afford to buy a game card for himself, we're here to serve as his digital crack pusher. So a big round of applause to Alex and his super-Viking cape-wearing guy. Congrats, buddy!

CONSOLE CORNER

Swipe this from your kid brother

 Not every good game comes out on the PC. We knew—we find it hard to believe as well. Still, we've gotta give props where they are due. So grab this game next time you're at the store:

■ NINTENDO DS

Feel the Magic: XY/XX

The holidays are over! That means we can start taking the time to dig through all the console games that piled up while we were reviewing *Half-Life 2* and *World of Warcraft*—quirky stuff like *Feel the Magic: XY/XX* for the new Nintendo DS. The art style is definitely out there: It looks like *Jet Set Radio* but plays a whole lot like *WarioWare*. To say that this game is quirky is the understatement of the day.

Do you know of any other game that has you furiously tapping the screen to knock scorpions off your girlfriend? Didn't think so. And blowing candles out by blowing on the handheld's microphone takes surreal gaming to whole new levels. Our favorite level, though, has got to be the one in which you try to make your onscreen character throw up the goldfish he accidentally swallowed. This game is so out there, you need to try it for yourself. Seriously.

The AIM Game

WideloadAlex: CGW Instant Message

File Edit Insert People

WideloadAlex has entered the room.

WideloadAlex: Hey hey! Just read the interview with Chris Taylor. I'll start off by letting you all know that I did, indeed, decide to wear pants for this interview.

Gizmo Gladstone: Then let me start off by saying thanks for keeping it in your pants.

WideloadAlex: You're welcome. Speaking of meat, what's today's topic?

Gizmo Gladstone: Nice segue. Life, the universe, Stubbs the Zombie, what's happening at Wideload Games...

WideloadAlex: I should be able to handle one of those...I think.

Gizmo Gladstone: Lol's start off easy, then. So, you learn lessons from your days at Microsoft, leave behind Bungie, and now start a new development house. Can you go a little into how you've decided to run things?

WideloadAlex: There were all these problems I saw that were screwing the independent developer [i.e., the company I wanted to start]. So I set out to start a company from scratch that not only solved these, but also solved the problems we'd face five to seven years out. One of the most important things we are doing is our development model, which is inspired by the film industry. We are keeping our team small and creative, and bringing on contractors for production.

Gizmo Gladstone: Makes sense considering that games are getting more cinematic and dynamic...and quite frankly more on par with films.

WideloadAlex: Right. And the coolest side effect is that the creative team here is just 11 people. We can have an open creative environment with NO politics. :-] And almost all the work is done remotely. The "site" is virtual--which is another important element of the process...tools.

Gizmo Gladstone: Well, I'm definitely curious to see how your first project turns out...so on to zombies! Stubbs the Zombie. Rubel Without a Pulse. Man, what a great idea for a game. What is your favorite part?

WideloadAlex: First, thanks! Definitely the "zombie game mechanic," that whole feeling that you've seen this whole zombie thing before, like in a zombie movie, but never from this perspective, where YOU are the zombie.. KING Zombie. It's pretty neat to go into an encounter, make a dozen zombies, and take them to the next encounter--then get them all mercilessly gunned down, but in the process wipe out the humans...and then they get up and you have your zombies back! It's awesome! They're like ammo. :-]

Gizmo Gladstone: How did the idea for Stubbs come about? I mean, did you guys watch an Evil Dead marathon?

WideloadAlex: We started with brainstorming. We actually developed a couple dozen games on paper and then took our favorite five through an initial design process. Stubbs the Zombie was our favorite because of the character and gameplay potential. Lol's just saw that we weren't interested in doing another WWII shooter. :-]

Gizmo Gladstone: Absolutely, and taking the flip side--playing as the antihero--is a huge draw.

WideloadAlex: Right, and the obvious challenges beg for creative solutions--like, zombies don't use weapons and zombies aren't so bright, but if you think about it, they have some awesome abilities, like making more zombies out of people.

WideloadAlex: And eating a dude's brain is visually very satisfying!

Gizmo Gladstone: And the Evil Dead-ish hand that possesses people? Nice touch by the way. So, obviously, you had to go with the Halo engine for this one.

WideloadAlex: Thanks. We couldn't resist the urge to use a gun somewhere!

Gizmo Gladstone: A zombie with a plasma gun? Hmmm.

WideloadAlex: Yeah, that one may stay on the cutting-room floor.

Gizmo Gladstone: You've got a new studio and a very cool game on your hands. Why go with Aspyr as the publisher? Why not try taking your business back to Microsoft or having EA publish or something like that?

WideloadAlex: Aspyr is an awesome partner. And that's the key word here: partner. We enjoy creative and process freedom, which is critical when trying to break out of the standard mold. Also, we have the exact same goal: to make Stubbs the Zombie the biggest game ever. We have Aspyr's attention big time. We are not one game in a state of 100.

Gizmo Gladstone: True enough. Prior to this, Aspyr has mostly been known for ports of old console and PC titles to the Mac.

WideloadAlex: Yeah, this is a big project for them, and they don't do a lot of original games.

Gizmo Gladstone: It's actually cool seeing other publishers trying to make it. These days, there are only a select few still around.

WideloadAlex: Yes. They've got a great crew over there. I'm damn impressed.

WideloadAlex: Hey, thanks for your time today. This is a neat way to do an interview.

Gizmo Gladstone: Thanks for saying that. I've been having a lot of fun on the past couple of these as well. Well, I know it's getting a little late out there. I should probably let you escape and unfurl your pants. But do you have any last parting shots, words of wisdom, sage advice, or random ramble you'd like to share with the masses?

WideloadAlex: Well, since we started working on this zombie project, the phrase "bite me" has taken on a whole new meaning.

Gizmo Gladstone: Thank you and good night, folks! Be-dum-dum! :-]

Wait? Where are you going? This page couldn't contain all the pearls of wisdom (and pants references) Alex Saropian had to offer. Seriously, he had too much good stuff to say! The only place you'll see it all is at aimgame.iup.com.

100 BUCKS

It's burning a hole in your pocket. Go spend it

MACGYVER Season One

\$27, WWW.AMAZON.COM

Superspies, eat your hearts out. MacGyver, the man to build a nuclear reactor

with an Etch A Sketch and some elbow macaroni, made nerds cool. OK, maybe only a little cool—but you get the idea. Who knows? Maybe you can build a solar-powered engine with the six DVDs in this set.

MUSIC Lazy Boy TV

\$13, WWW.AMAZON.COM

File this CD under "High Concept" in your collection. If you can get over the mega-

cheesy, strangely sampled electronics sound, the entire disc basically feels like someone strung together all the nonwork e-mails around the office and set them to music. Weird, we know, but in a way it works. With tracks like "Underwear Goes Inside the Pants," you know you've got something special here. Give it a listen online before you buy.

PULP Breakdown

\$4, WWW.DAVILSOWN.COM

Let's say you're the first super-powered guy in the world. You're a celebrity on TV

and movies when you aren't saving the day. You're so powerful that you don't even bother hiding behind a secret identity. The problem: Your wife and kid aren't quite as powerful. Issue #1 of this comic kicks off with the main character's family getting killed. He has a breakdown and now is ready to go on a killing spree or two.

FLASHBACK GTA: San Andreas Soundtrack

\$19, WWW.AMAZON.COM

Whether you worshiped the mullet, grooved to the heyday of gangsta

rap, or listened to whatever was on the radio, it's time to relive those days again. To get you mentally prepared for the time drain that is GTA, this two-disc soundtrack collects some of the greatest songs of the '80s and even throws in a teaser of what is in store for the PC version of the game.

SHOW TIME What's Up Dog Combo

\$4, WWW.WHATSUPDOGS.COM

What's better than pig hooves and snout ground and compressed into an intestine-

lining? NOTHING! That is why we line up like lemmings for these awesome hot dogs. It's a small storefront in downtown San Francisco but that doesn't stop us, and the copyedit department from making it a weekly Mecca. Throw in a bag of chips and a Coke and we're in heaven!

Whiplash, the Cowboy Monkey T-Shirt

\$15, WWW.WHPLASHRIDES.COM

Yeah! We've

now officially seen it all: a monkey who wears a tiny cowboy suit and rides a dog. Celebrate the whole Whiplash experience by exploring the website. There's a bio, pictures, and even a video to be seen of this hairy cowpoke in action. When you're done, be the first on your block to order up the official t-shirt. In fact, we're gonna put it out there right now: He should be our mascot.

ON THE DL

Freebies live and direct from the Web

Rome: Total Realism

<http://www.rometotalrealism.com>

Rome: Total War is a great game, as long as you're not a history buff. Seriously, war dogs, head hurlers, and screeching women taking over the world? It didn't work that way, and *Rome: Total Realism* does something about it by adding accurate troops, weapons, and maps to the game to let players experience ancient warfare like never before.

Many units have new textures that are much more detailed and interesting than the ones included with the base game, but the changes and additions go much deeper than that. Recruiting troops from provinces with cultures that are similar to yours is much easier now, a number of buildings that add a new dimension to city management are included, and unit statistics are fine-tuned to make combat much more interesting and challenging. Next, download the high-resolution map. Then grab the Time Limit Negator to get rid of the annoying battle clock. When you're done, also check out www.twcenter.net.

SNOW BUSINESS

\$15, WWW.SNOWWONDER.COM

It's the middle of winter and you're thinking to yourself, "Why the hell

are they trying to get us to buy snow?" Actually, this powder is nontoxic and turns water into snow. This may sound like no big deal right now, but just think of it: Pow! A surprise snowball attack you can spring in the middle of July!

Pocket Change: \$0.00

NEWS FEED

► Martin Edmondson, the founder of Reflections Studio (creators of the *Driver* series and the most recently bungled *DRIVER*), resigned from his position at Atari's internal studio. No news of when he'll resurface to answer for crimes against game design. ■

4 Atari's recently announced FPS adds new time travel mechanics to the mix

6 Watch your back, private: we're going into the trenches for a look at *Battlefield 2*'s multiplayer mode.

8 New techno-thriller RTS features plenty of sharp, original video footage

Psychonauts

Can I get you out of my head?

You see, there's this legend of a monster that lives in Lake Oblongata, but the monster is really a robot controlled by a mad scientist who is kidnapping the kids at Whispering Rock Psychic Summer Camp and making them sneeze out their brains so he can use them to fuel an army of psychic tanks while the brain-dead kids zonk out in front of the TV...so you have to collect the brains and save them." Tim Schafer finally pauses for a breath.

Schafer, president and CEO of Double Fine Productions, is a mad genius. To be fair, that's not much of a revelation at this point—after all, we're talking about the creative mind behind such adventure-game classics as *Grim Fandango* and *Day of the Tentacle*. And as you can probably tell from his story synopsis, Schafer's upcoming 3D action-adventure extravaganza is every bit as irreverent as his previous efforts.

A PENNY FOR YOUR THOUGHTS?

If the plot of *Psychonauts* doesn't pique your interest, its presentation certainly will. The game features some of the most elaborate, stylized art direction ever, with characters and locations that practically

defy description. It's only fitting considering that the main character—an acrobatic, googly-eyed psychic named Raz goes about his mission by literally getting into his friends' heads.

That's the key to *Psychonauts*' charm: literal interpretation. You'll constantly encounter people with all manner of emotional baggage—and we mean actual luggage that you'll need to sort in order to ease their troubled minds. For example, the subject of the aptly named Black Velvetopia level is a mad painter whose anger-management issues manifest as a wild bull running circles around his psyche. It's obvious that he's a few cards short of a deck—which you'll fix by hunting down the four queens he's missing.

And that's just one of the game's 13 madcap levels. Another finds you stomping around a sea-monster-filled city as a 50-foot-tall behemoth—and the creatures are, of course, more afraid of you than you are of them. Elsewhere, you'll encounter Napoleon Bonaparte's descendant, whose failure to live up to his forefather's legacy exhibits itself as a never-ending battle

against the French dictator on a *Risk*-like game board. And since his playing pieces have no confidence in him, you'll have to find ways of bringing them around.

MIND OVER MATTER

As you can imagine, there are plenty of ways to approach the oddball puzzles you'll face. While you can often solve problems through combat, Raz has an arsenal of psychic powers that open up numerous possibilities. For example, invisibility adds a stealth element to the game while telekinesis allows you to move objects, people, and the aforementioned board-game pieces. There are eight powers in all; you'll earn them by sorting emotional baggage and collecting abstract thoughts called "figments" that are scattered throughout each level. No worries—this is anything but your typical collect-all-the-neat-but-useless-stuff platformer. "It's better than collecting bananas!" laughs Schafer. **—Ryan Scott and Darren Gladstone**

INSIDE THE REDEFINITION

That is the key to *Psychonauts*' charm: literal interpretation.

PUBLISHER: Activision DEVELOPER: id Software GENRE: First-Person Shooter RELEASE DATE: November 2004

Doom 3: Resurrection

Little did we know at the time that *Doom 3*'s "surprise" ending was a mere prelude to this fall's onslaught of inconclusive shooters that just...sorta...and...

Hooray for the expansion pack and its plot-extending capabilities! *Resurrection of Evil* deals with matters that occur after the incident on Mars City and shows us just what Dr. Betruger has been up to.

This fellow we're looking at here is a Bruiser, and he's just one of the new missions you'll encounter on the highway back to hell. True to Id form, the creature's appendages have been replaced with heavy weaponry, and in what we'll call an "interesting" twist, his jaw has been reconstructed from a fully functional computer monitor. Yeah, he looks intimidating...until you remember that you're armed with the Artifact: a weapon forged in the fiery depths of hell that allows you to slow time and deal quadruple damage. Ouch! ■ Andrew Piller

— You'll need to sneak by these rooftop snipers. Better hit the Pause button!

Kudos to whoever invented the Rewind button—and we're not just saying that for all the times it's come in handy during choice scenes on late-night Cinemax. It also works great for undoing blunders in the most recent *Prince of Persia* games, and now Atari is incorporating its own Rewind button into an upcoming time-travel shooter titled *TimeShift*—and taking the concept to new, innovative levels.

HOW DOES IT WORK?

In *TimeShift*, you're armed with an experimental suit that allows you to slip in and out of the time stream in short bursts. Need to distract a sniper? Sneak into the courtyard to set off a mine, then quickly hit Pause, freezing the individual bits of shrapnel in midair. Next, dart across the field and take cover. As time unfreezes, the sniper is distracted by the explosion—allowing you to sneak past unharmed. Plus it just looks pretty frickin' cool.

It's apparent here that creativity is rewarded on this killing field. If you need a quick place to hide, try smashing a box open...then crouch in position, hit the

Rewind button, and watch as the box reforms around you. Perfect for stealth kills—not to mention cheap trips overseas. And some puzzles even have multiple solutions, for those of you who want to get really elaborate. Let's say your foes blow up a bridge to halt your progress. Do you: a) rewind time and snipe the demolition men, or b) freeze time and jump across the debris before it hits the ground? The choice is yours.

FUTURE IMPERFECT

But just what is the incentive for your time travels? Somebody has screwed with time, of course. A mad genius has traveled back to the 1800s with modern technology...hence all the cool steampunk paraphernalia that *TimeShift* is littered with. You'll find mechanized assault rifles and cars, not to mention steamthrowers that shoot hot air, literally melting enemies. The level of detail on this gadgetry is amazing—for example, individual cogs whir inside your various weapons, adding a nice touch of immersion to the experience.

Speaking of detail, the world itself is extremely well crafted. Leaves fall from trees as bullets whiz past, the lighting

effects are glassy and smooth, and there are lots of solid texture maps. What's running this graphical wonder? Brace yourself: *Will Rock*. Yes, the game we bashed a year ago in these very pages serves as the baseline engine for *TimeShift*, thus proving that even the lamest of games can have some saving grace.

In any case, time is definitely on developer Saber Interactive's side here, as *TimeShift* is due for a fall 2005 release. Saber is currently using this period to polish the game's 32-mission single-player campaign and analyze the feasibility of multi-player matches. We're not sure how the time-shifting mechanics might work across multiple machines, but we're definitely looking forward to the possibility of rewinding our best frags. "You like how I capped you there, buddy? What? You missed it? Let's just rewind and take another look at it then. OWNED!"

— Darren Gladstone

It's apparent that creativity is rewarded on this killing field.

■ New ■ Update

The Week's **LOCK 'N' LOAD**

Most of the game's environments are highly destructible—being in a building doesn't make you invincible, soldier.

If you're into making things go boom, *Act of War* delivers.

Atari Eugen Systems Real-Time Strategy RELEASE DATE Spring 2005

Act of War: Direct Action

Global thermonuclear war

The real world isn't all fun and games—we live in comparatively troubled times, and our current geopolitical climate has been lukewarm at best for these past three years. One might wonder how much worse it would get if the fight were to encroach on our own soil—and that's the possibility Atari is exploring with its upcoming real-time strategy game, *Act of War: Direct Action*.

The game features an engaging techno-thriller story line, much of which unfolds in original sharp-looking news footage and other live action. Much of the plot is the handiwork of novelist and former Air Force

captain Dale Brown, with whom developer Eugen Systems has collaborated closely during *Act of War's* development in order to ensure the game depicts realistic, hard-hitting modern tactical combat.

The action kicks off with a devastating terrorist attack on San Francisco. The president responds to the imminent threat by mustering the troops—which includes calling the boys overseas back home. Little does anyone know that this course of action plays right into the hands of a mysterious shadow group whose plans for economic domination are considerably more global and far reaching.

WAR IS HELL

The combat itself occurs in an RTS interface that fans of games such as *Command & Conquer* should feel right at home with. As one of three playable factions, you'll wage war in a number of urban environments, using every geo-graphic feature to your utmost advantage. Snipers can pick units off from the relative safety of buildings, aircraft and tanks can be called in to clear an area of obstacles or threats, and prisoners can be captured in order to generate ransom money—which, along with oil, acts as the game's primary resource.

Each faction has roughly three dozen units to sink your resources into, along with a unique tech tree that highlights their specific advantages. Task Force Talon emphasizes efficient tactics with powerful but expensive commando units, while the nefarious Consortium relies on large numbers of weak, expendable troops. The U.S. Army is somewhere in the middle, with flexible, well-rounded infantry and a strong air force.

Eugen is aiming for a solid 20-hour single-player experience, along with the obligatory multiplayer and skirmish modes. And it's all wrapped in a stunning game engine that—while perhaps not terribly revolutionary for the RTS genre—looks awfully impressive. **Ryan Scott**

The president responds to the imminent threat by mustering the troops.

The game's story is told through expertly filmed cut-scenes.

WAR GAMES

DIGITAL UNDERGROUND

PC ROM 10tacle Studios AAA AR 17 Q1 2005

Neocron 2: Beyond Dome of York

Word on the street: Cyberpunk thrillers are surprisingly uncommon on the PC, with few decent examples. Therefore, sci-fi fans should immediately jack in to this intriguing, futuristic MMO. All the action unfolds in real time, with both on-foot and vehicular first-person combat. The game includes provisions for outfitting a character, researching item upgrades, and hacking into a high-tech VR world. Think *Shadowbane* meets *Shadowrun*.

Sounds kinda beat: German developer 10tacle Studios is just now carving out a foothold for itself. Whether the firm is ready for expansion into America is anyone's guess—and this is the sequel to a title which was never released outside of Europe. MMOs don't come cheap, either. Sans a domestic publishing partner's intervention, it's unlikely the studio has the resources required for a successful launch.

PC ROM 3000AD AAA AR 15 Q1 2005

Universal Combat: A World Apart

Word on the street: The only thing bigger than indie darling Derek Smart's mouth? The number of spaceflight simulators he's single-handedly shepherded through production. Meet the mad genius' latest creation: an add-on for last year's most underrated interstellar adventure. It ships as a stand-alone retail edition or downloadable expansion, and its enhancements include new weapons (turrets, machine guns, and combat rifles), two fresh 16-mission campaigns, and a pair of original 32-player co-op challenges.

Sounds kinda beat: Lest ye forget, the ongoing lawsuit with DreamCatcher over the original game remains unresolved, which could impede this title's launch. Corporate executives aren't the only ones who may feel cheated: Apparently, little is being done that would expand the series' reach beyond its existing audience—but the faithful might appreciate the gesture nonetheless. A renowned obsessive, Derek Smart is known for rewarding his fan base with a steady stream of quality content.

PC ROM 1C AAA/AR AR 15 Q1 2005

Rig 'n' Roll

Word on the street: If you're someone who admires the *Hard Truck* franchise, raise your hand. That makes two of us. Witness its spiritual successor, an epic that casts you as a young lad bent on controlling California's cargo transportation industry circa 2024. Speeding along behind the wheel of a semi, you'll brave the bustling highways between San Francisco, San Jose, and Los Angeles, while carting goods and competing against rival drivers. Methamphetamines sold separately.

Sounds kinda beat: High concept, it isn't. A lack of focus could present potential issues, too: Beyond simple racing challenges, you're also tasked with managing drivers and building a business. No good reason has been offered as to why the experience is set in the future, either—a warning sign that realism has been tossed out the window. The plot also promises "a conspiracy that'll test your skills to the limit." Mmm-hmm

2004 GAMES OF THE YEAR

BY THE EDITORS OF CGW

What is there to say about 2004 other than “good riddance”? Well, OK, that’s a bit cranky. But you know us: We’re the cranky guys. Yay! Still, you have to admit, even if you’re cheerier than us, that there were some serious lowlights for PC gamers in 2004. The closing of Sierra, Black Isle Studios, Legend Entertainment, and other great development houses. The cancellation of *Sam and Max*. The lame PC versions of cool console games like *Spider-Man 2*.

But despite a rather steady procession of bad news, the better news is that by year’s end, 2004 yielded, rather amazingly, an incredible bounty of great PC games. In fact, let us be bold here and say that this was the best year for PC games since 1998, the year of *Half-Life*, *StarCraft*, and *Grim Fandango*—and to prove it, we have a bruised, bloody, and weary staff of editors who fought furiously over all the awards.

That’s not a complaint. If there is even an ounce of truth to the “PC gaming is dying” mantra that’s been floating around for a couple years now, then let it die like this every year—because from where we’re sitting, we’re in PC gaming heaven. And the games on the following pages are just some of the reasons why.

108

GAME OF THE YEAR

WORLD OF WARCRAFT

PUBLISHER: BLIZZARD ENTERTAINMENT DEVELOPER: BLIZZARD ENTERTAINMENT

NOMINEES

City of Heroes
 Half-Life 2
 Sid Meier's Pirates!
 The Sims 2

As we hand *World of Warcraft* our 2004 Game of the Year award, we have only two questions: What is Blizzard Entertainment smoking? And where can we buy some?

Because we want some. We want whatever it is that enables these big-

brained übergeeks, working in a business park in Irvine, CA, to once again fashion a game world so insidiously addictive, so rich in imagination, so fun and beautiful and funny and charming that we have no desire to ever log out and resume our real lives. It's a hallmark of every game Blizzard makes, and though the odds were against it more than ever this time, *World of Warcraft* once again proves that it is a design house without peer, as the game is every bit as good as, or better than, anything it's ever done. And that's a freakin' miracle.

Just as it did with *Diablo* for RPGs and *WarCraft* for strategy games, Blizzard has taken a genre that was primarily a domain for the hardcore—in this case, online massively multiplayer games—and found a way to bring it to the masses without sacrificing its integrity. MMORPGs have been immensely popular before *World of Warcraft*, for sure, with games such as *Ultima Online* and

EverQuest drawing hundreds of thousands of players. But these games have always preached to the converted. They've always spoken in code, wrapped themselves in the arcane, reveled in their difficulty. But *World of Warcraft* does what Blizzard games always do: It de-dorkifies the genre and makes it understandable and appealing to everyone. Though the rap on Blizzard is that it only synthesizes and refines what others have done, rather than revolutionize or innovate, it's a bum rap, especially this time. You want revolutionary? How about an online game that's actually more fun than work? That rewards players instead of punishing them? That stays compelling even hundreds of hours in? That's *World of Warcraft*. That's our Game of the Year.

There is a generosity of spirit at work here. In translating its immensely popular strategy franchise to an online world, Blizzard has ensured that everyone should want to come along for the ride, with heaping dollops of gameplay for newbies and '1337' dudes alike. The generosity extends to the game's technical aspects as well, with extremely forgiving system requirements and even Mac compatibility—a rarity these days. The *coup de grace* here is that despite the relatively low-end requirements, and despite the fact that quite a few other games went out of their way this year to take advantage of all the latest bells and whistles in the highest-end 3D cards, *World of Warcraft* was, in terms of art direction, the most beautiful PC game released in 2004 by far. Eschewing 3D photo-realism for a "painterly" look that brilliantly captures the feel of the strategy games, Blizzard has created a stunning-looking fantasy world—with breathtaking vistas and sunsets, majestic mountainsides and buildings—that is a never-ending wonder to explore.

That *World of Warcraft* beat all our other nominees is further testament to its greatness, given the incredible competition this year. *Sid Meier's Pirates!* is the year's most purely entertaining single-player game, a remake of a classic that completely holds its own, a glorious amalgam of strategy, action, and puzzle solving that kept our editors up all night, as all great games do. *The Sims 2* improved upon the original in every way, an impressive achieve-

QUICK AWARDS

BEST CHARACTER CREATION: CITY OF HEROES

PAST WINNERS

- 2003 Knights of the Old Republic (BioWare)
- 2002 Grand Theft Auto III (Rockstar)
- 2001 Operation Flashpoint (Codemasters)
- 2000 The Sims (EA)
- 1999 Unreal Tournament (Epic)
- 1998 Half-Life (Sierra)
- 1997 Jedi Knight (LucasArts)
- 1996 Diablo (Blizzard)
- 1995 Gabriel Knight 2 (Sierra)
- 1994 X-COM (Microprose)
- 1993 Doom (id Software)
- 1992 Links 286 Pro (Acclaim)
- 1991 Civilization (Microprose)
- 1990 Wing Commander (Origin)
- 1989 Railroad Tycoon (Microprose)
- 1988 SimCity (Maxis)
- 1987 Empire (Interstel)
- 1986 Earl Weaver Baseball (EA)
- 1985 Ultima IV (Origin)
- 1984 Kampgrube (SSI)

ment given that the first game is a design masterpiece. But the new graphics, the goal-oriented gameplay, and the ambitious foray into creating family trees knocked us out. *Half-Life 2*, everyone's default pick to win this year, is indeed a fantastic roller coaster of a ride, not as great as the original but still leagues above most other shooters. And the upstart *City of Heroes* came within one mere vote (and hours of arguing) of beating *World of Warcraft* with its fantastic superhero-based MMO gameplay. It's an outstanding game.

But in the end, *World of Warcraft* gets the victory because it's the game that reached the furthest, had the most to overcome (including our expectations), and still managed to hit it out of the park. It's the crowning achievement to date of a PC gaming house that seems furiously incapable of producing anything less than great. At a time when everyone continues to wring their hands

over the future of the platform, when publishers are cutting down on PC development and sticking us with crappy ports, Blizzard, as if oblivious to all that noise, released an awesome gift of a PC game and proved once again that the only thing ever holding us back is our own imagination.

BLIZZARD HAS TAKEN A GAME THAT WAS PRIMARILY A DOMINANT FOR THE HARDCORE AND BROUGHT IT TO THE MASSES.

**QUICK
AWARDS**

UNDERDOG PUBLISHER OF THE YEAR: **DREAMCATCHER**

STRATEGY GAME OF THE YEAR (GENERAL)

THE SIMS 2

PUBLISHER: ELECTRONIC ARTS DEVELOPER: MAXIS

NOMINEES

The Political Machine
RollerCoaster Tycoon 3
Silent Storm

It's a testament to how great a year it was for PC strategy games that we felt compelled to separate the real-

time games into their own group. What that left was a group of excellent strategy games that couldn't be more different from one another. That's not a bad thing (just think of the diversity of Academy Award Best Picture nominees every year), but it does make judging and comparing them against one another a huge chore.

During those very crucial far months, we were enamored with Stardock's *The Political Machine*, which let us run the 2004 presidential campaign in a way that was far more fun than its real-life counterpart. *RollerCoaster Tycoon 3* overcame the series' sophomore slump with a great state-of-the-art redesign. And Nival Interactive's *Silent Storm* almost walked away with the award because it exhibited an addictive combination of turn-based strategy and roleplay that hasn't been so well ex-

ecuted since *VeggieTales Alliance*.

But it was the 800-pound gorilla that is *The Sims 2* that did, indeed, stomp the competition. Better than the original in every way, *The Sims 2* is a deep and complicated strategy game that is such a hoot to play, it may not even cross your mind how profound your decision making is. More than any other PC game, *The Sims 2* is a Rorschach test of our imaginations and desires and goals. Plus, they fixed it so we didn't have to go to the bathroom as often this time—that's the stuff that awards are made of. ■

STRATEGY GAME OF THE YEAR (REAL TIME)

WARHAMMER 40,000: DAWN OF WAR

PUBLISHER: THQ DEVELOPER: RELIC

NOMINEES

Amazon Total War
Kohan II: Kings of War
Armies of Exigo

2004 was a banner year for real-time strategy games. While each of our nominated titles

was not necessarily created equal, each did make its own mark on a genre that has been largely stagnant since *WarCraft III*'s 2002 release. For us, one RTS game stood head and shoulders above all the others in this year's crop: *Warhammer 40,000: Dawn of War*.

In our Holiday 2004 issue, reviewer Tom Chick called *Dawn of War* "a shot of pure-

grade real-time strategy adrenaline straight into the veins—an absolutely dizzying rush." We can't possibly think of a better way to describe Relic's latest RTS masterpiece. *Dawn of War* excels in its category—not necessarily in terms of innovation, but rather due to the razor-sharp level of refinement it exhibits. Relic has managed to capture nearly every single aspect of the RTS experience perfectly, while expertly neutralizing many of the genre's traditional hurdles.

What's more, every piece of the game feels like an integral part of a tight and cohesive whole. Whereas most RTS titles force you to split your time between

resource management and combat, these components are effectively one and the same in *Dawn of War*. The fighting is fast, furious, and constant, with four of the most fundamentally diverse factions in any strategy game. *Dawn of War* also demonstrates an impressive level of graphical detail, even going so far as to let you "paint" your army—a clever nod to *Warhammer*'s tabletop gaming roots. It all adds up to an extraordinarily well designed piece of work—making it not only our 2004 Real-Time Strategy Game of the Year, but also one of the best strategy games ever made. ■

QUICK AWARDS

COOLEST MENU SYSTEM: THE CHRONICLES OF RIDDICK: ESCAPE FROM BUTCHER BAY ➤➤

ACTION GAME OF THE YEAR

THE CHRONICLES OF RIDDICK: ESCAPE FROM BUTCHER BAY

28 VU GAMES Developer: STARBREEZE STUDIOS

NOMINEES

Prince of Persia: Warrior Within
Scribbleland
Tom Clancy's Splinter Cell: Pandora Tomorrow
Tribes: Deadly Shadows

The Chronicles of Riddick:

Escape from Butcher Bay

Bay consists of much more than just Vin Diesel's gravelly voice rumbling through your speakers. It also happens to be the best movie prequel ever produced, a port that eclipses its former platform iteration, a slick action game with fantastic set pieces, a visual experience on par with *Doom 3*, and an opportunity to play the most hardcore antihero on the PC.

Although you play most of it through the eyes of a digital Diesel, *Riddick* isn't just an FPS. The other nominees are very good games that tend to excel in one area. *Riddick* deftly fuses guns, sneaking, hopping, shivs, questing, vehicular homicide, fistcuffs, and harsh language into a fantastic game that constantly presents

new challenges and surprises, and feels like a single game, not a hodgepodge of different genres. While it did all this on the Xbox already, the superior PC version adds a developer commentary (which will hopefully become standard in future games) graphics that have been polished even further, and even more gunplay (notably, a riot-armor sequence absent in the Xbox version).

Much ballyhoo has been made about combining games and film, and while we're finally getting competent and even solid licensed games, *Riddick* is easily both what a licensed game should aspire to and what an action game should aim for as well. **A**

AWARDS

MMORPG OF THE YEAR

CITY OF HEROES

PUBLISHER: NCSoft DEVELOPER: CRYPTIC STUDIOS

NOMINEES

World of Warcraft
EverQuest II

This category led to one of the most closely contested debates among CGW's editorial staff.

And while *World of Warcraft* walked away with our overall Game of the Year award, *City of Heroes* gets our nod as MMORPG of the Year. We don't mean that in a "second place" sort of way, either—*City of Heroes* flies high above the competition, thanks to its staggering character-customization options, its immersive setting, and hands-down the most creative use of source material we've ever seen in this type of game. And, perhaps most importantly, it really makes you feel like a superhero.

City of Heroes innovates in ways that no other MMO has ever managed to. The character-generation tool gives players an unparalleled amount of freedom, allowing every individual facet of an avatar's appearance to be customized. And you will continue to customize your character, in terms of both form and function, all the way through the game. Every new level unlocks another cool power or ability, which means there's always something tangible to strive toward—making the traditional MMO level grind much less of an issue.

Speaking of issues, *City of Heroes* packs in an enormous amount of content, thanks to the free "bonus issue" downloads that developer Cryptic Studios continues to produce. Three such expansions—each easily comparable to a full retail product—have been released so far. And with *City of Villains* coming this year, this game is only going to get better.

As Darren said in our August 2004 review, "We're still playing this game night and day, long after the review is over. It's still true."

QUICK AWARDS

BEST OPENING CUT-SCENE: WARHAMMER 40,000 **A+**

SINGLE-PLAYER SHOOTER OF THE YEAR

PAINKILLER

PUBLISHER: DREAMCATCHER DEVELOPER: PEOPLE CAN FLY

NOMINEES

Doom 3
Half-Life 2

Yeah, we didn't see this one coming, either. How closely was Single-Player

Shooter of the Year contested? Over two days, multiple votes resulted in multiple three-way deadlocks. A ranking system was devised, points allotted, and we were still knotted up. But finally, thankfully, the filibustering ended, and to the surprise of everyone (including its supporters) it was the dark horse candidate that grabbed the prize.

That struggle is a testament to the overpowering strength of each of these games—honestly, you could pick any one of them as

the best FPS of the year and it would be hard to quibble. *Doom 3* is a muscular triumph of gritty up-close-and-personal carnage, a game that made us jump out of our seats more than any other title this year. It didn't hurt that its game engine is simply amazing at creating the inky abyss where the game takes place. On the other hand *Half-Life 2*'s source engine isn't too shabby, either with the wizards at Valve crafting a world in which the mood changes constantly, but is riveting throughout.

So why *Painkiller*? Why the game that was on no one's radar? Glee. Simple, unadulterated, blood-drenched, nonstop, adrenaline-soaked glee. On crack. An

unapologetic throwback to a time when FPS action was all about relentless speed and carnage, *Painkiller* breathlessly delivers an incredibly distilled gaming experience that grabbed us by the brain stem and refused to let go. It's pure dumb fun—only without that much "dumb," thanks to its clever Black Tarot system and a series of optional level-specific bonus goals. As slick and polished and unique as its competitors are, *Painkiller* won the personality portion of the contest hands down, thanks to the best weapon set since the original *Half-Life* and some of the most imaginative and compelling enemies and environments reduced to ones and zeroes. We loved all three of these games, but in the end, we loved *Painkiller* just a little bit more. ■

SHOOTER (MULTIPLAYER)

UNREAL TOURNAMENT 2004

PUBLISHER: ATARI DEVELOPER: EPIC GAMES

NOMINEES

Battlefield Vietnam
Joint Operations
Typhoon Rising

When we shipped the "2004" title on the newest Unreal Tournament, we didn't know what

to expect. Was the publisher just cashing in on the series' name with a small leap over last year's game? Nope, Atari reclaimed the multiplayer shooter crown and redeemed the series in one fell swoop.

UT2004 saw the rebirth of the assault mode and the addition of a new control-point-based onslaught skirmish mode that rethought how battles should be fought. Plus, there's imaginative and monstrous playable vehicles you won't find in any other game. It may not be "realistic" (try downloading the Red Orchestra mod for UT2004 if you want the ultimate Battlefield-ish experience), like *Joint Operations* or *Battlefield*, but UT2004 makes up for it by providing a pure adrenaline rush. ■

PUBLISHER: THE ADVENTURE COMPANY DEVELOPER: LIXIE WUNDERLICH

NOMINEES

Dark Fall: Lights Out
Myst IV: Revelation
Wanted

It's surprising that even the adventure category, a genre that has been languishing the past few years, came up with some solid sleuthing games in 2004. *Myst IV: Revelation* became a solid front-runner for the award by polishing and refining what was in previous titles—a beautiful world to explore. But we're looking for innovators here.

Missing: Since January isn't just *Majestic* done right; it's *Majestic* done. The setup is simple enough: Two reporters are missing. The only clue to their fate is a cryptic, encrypted CD-ROM. The mood is perfectly set with expertly shot videos and flash puzzles on the disc that make you feel as though you're squaring off against an ingenious serial killer. When you aren't deciphering clues or trying your hand at the witch minigames, you'll be scouring the Internet for doctored and real websites that hold clues to the ultimate mystery. And even if you're having a tough time with the clues, timed hint emails from other cyber sleuths show up in your inbox. We can't wait to tangle with this mastermind again. ☒

QUICK AWARDS

TITLE OF THE YEAR: **VIETCONG: FIST ALPHA** ➤➤

AWARDS

NOMINEES

Title Bout
Championship Boxing
World Soccer
Winning Eleven 7
Tony Hawk's
Underground 2

The joke goes like this: Q:

What's our Sports Game of the Year?

A: I dunno, what number *Madden* are they up to? But not this year, thanks to a bunch of games

that elevated their respective sports in impressive ways. Sure, it's hard to think of a text-based game like *Title Bout* raising the bar, but you just try it and see. No other game captures its sport more faithfully

than *Winning Eleven 7*. And *Tony Hawk*, well, it was just great, crazy fun.

But this year, *Tiger* burns brightest—it's a golf game that even nongolfers will love. Don't worry, golf sim enthusiasts will find plenty here, but for the rest of us, there's a surprisingly accessible game driven by great character development, challenges against both fictional foes and real-life legends of the game, and a seemingly endless series of goals to drive you to play just one more round. If that's not a winner, we don't know what is. ☺

plotting trade routes. The next, you're

pitched sword fights on the deck. There are other mini-games as well, including a Pac-Man-esque event that has you sneaking in and out of enemy ports and, even, a dancing game. Honestly, we did rethink this remake could do justice to the original game. But it not only captures the spirit of the original, but looks great in the process. We're ready to walk the plank forever, questioning you, Sid.

RPG OF THE YEAR

VAMPIRE: THE MASQUERADE BLOODLINES

PUBLISHER: THE ADVENTURE COMPANY DEVELOPER: LUDUS MUNDIORUM

NOMINEES

Dark Fall: Lights Out
Myst IV: Revelation
Wanted

Don't let the lack of competing nominees here imply that *Vampire* won by default. *Bloodlines* would have been tough to beat even in an RPG-loaded year because it offers all the things role-players love in their games: a deep, balanced character-creation system, a truckload of interesting

quests, a good story, and great NPCs to interact with. All of this goodness is wrapped in one deliciously bad package—a graphically rich, sexually charged midnight underworld populated by a wide variety of scheming, evil, and occasionally flat-out insane bloodsuckers and their hangar-ons. This is a huge game that rarely misses a step during its 50-plus hours of play, a game that truly rewards players for trying to get into the head of a "real" vampire instead of merely asking them to hack their way through the game world, and that adds up to a little thing we like to refer to as "award-winning." Besides, how can you not love a game that lets you create your own personal ghoul? Exactly. ☹

QUICK AWARDS

BIGGEST LETDOWN OF THE YEAR: LEISURE SUIT LARRY: MAGNA CUM LAUDE ☹☹

BEST HARDWARE

AMD ATHLON 64 FX-55 SOCKET 939 PROCESSOR

MANUFACTURER: AMD

For the second year in a row, AMD processors nail the top honor. Why? AMD has officially beaten Intel like a red-headed stepchild by overpowering it in the latest rounds of the processor wars. Just take HyperTransport technology, with which low pin counts, low-latency responses, and reduced bus architecture create fewer processing bottlenecks and more bandwidth for the Athlon 64 FX-55.

This computing muscle dominated Intel's 3.46GHz Extreme Edition 1066 frontside bus top dog in all benchmark testing. Using 3D GameGauge games, the FX-55 scores anywhere from 5 to 20 percent better than Intel's processor across the board. The most telling part is the simple fact that the top five UGM systems all use FX-55 processors, and the top Nforce 4 SLI systems also utilize AMD.

And that's not even mentioning the FX-55's buffer overrun and buffer overflow built-in virus protection code. You practically need a chair and a whip to keep AMD's beast at bay. If you want the ultimate gaming processor, look no further. ☑

SPECIALAWARD HARDWARE DESIGN

SPECIALAWARD

Falcon NW FragBox 2

The retooled FragBox 2, like the original, is designed specifically for LAN parties. This little gem packs a wallop with its high-performance PCI Express components, including both

AMD's new Athlon 64 and Intel's Prescott-based processors, as well as Nvidia and ATI graphics card solutions. Raphael liked this design so much he bought both first- and second-gen FragBox rigs from Falcon NW. Jealous?

BESTTREND PCI EXPRESS

BESTTREND

PCI Express, or PCI-E for short, is the newest and most scalable and backward compatible I/O (input/output) architecture, making it useful for a variety of slick form-factor computers. PCI Express is also a hell of a lot cheaper than standard PCI I/O boards. But its massive throughput, especially with videocards, makes it the perfect technology for gaming. Look for more manufacturers to jump on the PCI Express bandwagon because Nvidia and ATI have already brought their superfast graphics cards to the PCI Express party.

AWARDS

INTERN OF THE YEAR: RYAN SCOTT

SPECIAL AWARDS

PUBLISHER: DREAMCATCHER
DEVELOPER: PEOPLE
CAN FLY

BEST WEAPON

The Painkiller, Painkiller

In a year dominated by cool FPS titles, *Painkiller* has the coolest weapons by far: shuriken-shooting lightning guns, shotguns that freeze the undead, stake-firing firearms.... But the best of them: the Painkiller. It's a whirling Ginsu of doom that gives off a satisfyingly creepy grinding sound as you mow down the undead. The sit-fire launches out and yanks bodies closer to you, thanks to Havok physics. Actually, now that we think about it, the whole thing sounds a lot like Robert's office.

BEST WEAPON RUNNER-UP

PUBLISHER: EA GAMES
DEVELOPER: MAXIS

The Vacuum, The Sims 2

We've all got annoying next-door neighbors. They overstay their welcome, say stupid things, and generally ruin your night. In the real world, you don't have many options. In *The Sims 2*, you can buy a vacuum. A vacuum? Yep. With it you can suck unwanted houseguests up like a bunch of dust bunnies. We're trying to see if they have a Darren-sized nozzle attachment.

PUBLISHER: VU GAMES
DEVELOPER: VALVE

BEST MUSIC

Half-Life 2

This was actually an incredibly close year for judging the best music in games. *EverQuest II* has a great orchestral score. *World of Warcraft* includes some majestic tracks, most notably the one that plays the first time you enter Stormwind. But by far, the best use of music has to go to *Half-Life 2*. It helps set the mood throughout the game and ratchets up the tension to new highs. As Combine forces chase you through burned-out buildings, the music pushes you to frantically kick open doors in order to find an escape route.

BEST SOUND

PUBLISHER: ACTIVISION
DEVELOPER: ACTIVISION
SOFTWARE

Doom 3

The best advertisement for 5.1 gaming is *Doom 3*; in fact, if you don't have a 5.1 system, you might miss a lot of the game's subtle sounds.

The grinding industrial noises and creepy echoes that resound through the Mars base really set the mood in the game, and the carefully layered shrieks and the sudden sound of pipes hissing had us literally jumping out of our chairs.

BEST USE OF A LICENSE

PUBLISHER: EA GAMES
DEVELOPER: EA LA

LOTR: The Battle for Middle-earth

More than a simple RTS, *LOTR: The Battle for Middle-earth* puts you right inside the trilogy's world. The battles, the presentation, and the detailed units sell the illusion and blur the line between games and film. But this award hardly comes as a surprise. After all, EA's focus is now on the Hollywood flash factor in games. This is the same company that is funding a special gaming-development part of USC's film school.

BEST USE OF A GAME ENGINE

PUBLISHER: ENCORE
DEVELOPER: NIVAL
INTERACTIVE

Silent Storm

In a year of impressive engines for first-person shooters, *Silent Storm* quietly sneaked in and impressed the hell out of us. By all rights, a hardcore turn-based strategy game shouldn't look this good. Its engine calculates every detail—every broken window and bullet casing—and lets you see it all onscreen.

QUICK
AWARDS

BEST TCHOTCHKE AWARD:
EVERQUEST II SWORD

BEST TREND

Good Strategy Games

Last year offered relatively slim pickings when it came to strategy games. We're not slagging *Age of Wonders: Shadow Magic*, but c'mon! Just take a gander at all the amazing stuff that showed up on store shelves this year. January saw the release of *Silent Storm*, the heir apparent to *Jagged Alliance*. Once we played it, the initial thought on everyone's mind was "Strategy Game of the Year contender." *Silent Storm*, however, was far from alone. This year saw a rebirth of the genre with not one, not two, but three really good RTS titles showing up in time for the holidays. *Rome: Total War*, *Warhammer 40,000: Dawn of War*, and *Lord of the Rings: The Battle for Middle-earth* are all great titles; and each is worth its weight in CD-ROMs. Now if only someone would pay this much attention to the floundering role-playing category that is dying a slow, painful death.

NPC OF THE YEAR

PUBLISHER: VU GAMES
DEVELOPER: VALVE

Dog, Half-Life 2

For the second year in a row, the NPC of the Year award goes to a robot. So whip out a can of Rustoleum, folks, for man's new best friend. For all the awesome facial animation in *Half-Life 2* and good voice acting (sorry, Barney), a Frankenstein robot that doesn't say a word but thinks it's a loyal puppy is by far our favorite character. We need an expansion featuring him!

WORST TREND

Bait and Switch

You've seen this tactic used for years in shady electronics stores. Advertise one thing, then, when the suckers get to the store, stick them with something worse than what they were planning to buy. Now we're seeing the same tactic being used to sell games.

Probably the most offensive example came this summer with the release of Activision's *Spider-Man 2*. The console version of the game

is a GTA-like experience that has you sailing through a virtual New York City as you bust criminals. All the ads, all the screenshots on the box indicate that you'd be getting the same exact experience on the PC. The only thing that's busted with the PC version is the actual gameplay. It's nothing like the console version, but rather a glumpy kiddie game created by developer Fizz Factor (the guys behind *The Hobbit* adventure game from last year). Of course, it's our obligation to bash this game in print. We thought we were done, but THQ employed a similar tactic with *The SpongeBob SquarePants Movie* game. Boo!

SPECIAL ACHIEVEMENT IN ART DIRECTION

World of Warcraft

PUBLISHER: BLIZZARD
DEVELOPER: BLIZZARD

What?!?! We didn't hand this award to *Doom 3* or *Half-Life 2*? While these games pushed technology to new levels of graphical splendor, *World of Warcraft* went in a whole other direction.

Just look at the side of the game box: PIII 800MHz, a 32MB graphics card. What year are we living in, 2001? The fact that this game can look this good on a crummy notebook is great news for people who can't buy a new PC every week. *WOW* is a triumph of art direction, a vividly beautiful world we never want to leave.

COASTER OF THE YEAR

For all the cream rising to the top of gaming, there must be a sedimentary layer of dead files that have drowned pitifully whilst furiously mating upon the foamy excellence forever bobbing lightly above them. And plunging to the bottom of the barrel this year were the infantile serial killer that was *Leisure Suit Larry: Magna Cum Laude*, the legacy-incinerating *Lords of the Realm III*, and the crap of *Spider-Man 2*. But nothing stood between gaming and fun quite like Valve's migraine- and game-delivery app, Steam.

Yeah, Steam was fine for the folks who bought *Half-Life 2* online and it's "gaming's future." But if the future doesn't improve on the initial Steam model, we're ready to be turned into soyant green right now. Weeks after release, Steam is still fouling up *Half-Life 2* installations, still arrogantly commandeering our PCs and forcing us to deal with it every time we boot up, and still preventing gamers who thought they purchased a single-player offline game from playing because the online servers are down. Foisted upon unsuspecting consumers like a cold sore from a girl you initially thought was hot, Steam has earned our enmity...and our hallowed Coaster of the Year designation.

Reviews

We're tough because we care

❑ The new PC-only content takes place in one of the game's power suits. It's nice, but it doesn't really extend the playing time.

❑ This game is so tough that even the health power-ups hurt.

STRONGER: Vivendi Universal Games **DEVELOPER:** Starbreeze Studios **GENRE:** Action **MP RATING:** M **FEV:** **RECOMMENDED:** Pentium 4 3GHz, 512MB RAM, 128MB videocard, 4.4GB install **MINIMUM:** Pentium 4 1.8GHz, 256MB RAM, 64MB videocard, 3.7GB install **RECOMMENDED:** Pentium 4 3GHz, 512MB RAM, 128MB videocard, 4.4GB install **MINIMUM:** Pentium 4 1.8GHz, 256MB RAM, 64MB videocard, 3.7GB install

The Chronicles of Riddick: Escape from Butcher Bay—Developer's Cut

Model prisoner

❑ Despite moments of gunplay, there's a heavy stealth element in the game.

❑ No, seriously, there are big stealth sections.

❑ The fist-fighting portions of the game are surprisingly good.

No more puffy harem pants.

EA's other RTS—the one without hobbits—is the better RTS.

All of the movie's crappiness with none of the homoeroticism.

Ⓢ The guards have some nice heavy weaponry while you make do with a shotgun—good luck.
Ⓢ The graphics are simply amazing, creating a tough, gritty game world and a Vin Diesel as "Ifelike" as the "real" one.

After a sit-down, shut-up ride to Butcher Bay, an off-world penal colony for criminals not worth sweeping under their own planet's rug, Riddick is pissed. The bounty hunter bringing him in turns his back, and you, now inside the head of the Diesel-fueled antihero, reach out and twist his skull like a stubborn knob on the door to freedom. Soon you're in a tunnel that looks like it leads to safety, only to learn that the light at its end is an oncoming train. Not a literal choo choo...just the realization that your fast break was pure fantasy, a figment of a prisoner's imagination. Escaping won't be so easy, but you're already well aware that 1) you won't be anybody's bitch, and 2) this is anything but another cynical movie-license cash-in.

PICK YOUR JAW UP OFF THE PRISON FLOOR

Inspired by the *Alien* movies' mining ships and dingy prison planets, Butcher Bay is all cold steel corridors, grease-stained machinery, and graffitied concrete, normal mapped with makes-you-want-to-touch-it texture. But the game's pitch-black beauty goes beyond the surface of things. Dim cellblocks and caverns cast deep shadows, and wary patrolmen who lose track of you in the murk turn their flash lights on foreboding recesses to root you out. (One of the game's best moments: sneaking up behind a guard who, sure that he's cornered you talks smack, only to suddenly feel your fingers at his throat.) Unfortunately, that sexiness comes at a price: *Riddick* is a hard-core hog and runs like a high-res slide show on

al but the best rigs

Slashed up, pockmarked, tattooed, and otherwise scarred: addicts, lunatics, middlemen, and contraband movers, your fellow inmates are as convincing as the scenery. Each wears his history on his face and has his own attitude and agenda to match (sometimes no more than a succinct "F*** off," but it suffices). Plus, Riddick does more than frag whom—or whatever—is in his field of fire. You'll shoot craps with these guys and exchange favors for shivs. Later, when you're looking to pick a fight with Abbott, an overzealous officer voiced by rapper Xzibit, you'll have the choice to help a junkie find his fix, hunt down a snitch list, fistfight your way up the food chain, or poison a hardass—any one of these works. We're not talking *Deus Ex*-degree open-endedness, but—and this is important—the time you spend pent up gives your escape plans a sense of purpose. Breaking out means more when you've actually sat behind bars.

When you do finally get your hands on a gun, you've got good reason to use it. Rather than the usual big-bigger-bigger progression of blasters to match a tough-tougher-toughest parade of baddies, *Riddick's* weapons locker is lightly stocked. Still, shoot-outs are fierce—your foes roll into full crouches, fall back, and fire from cover—no wait-around-a-corner-and-watch-em-file-into-your-sights stuff here.

KILL OR BE KILLED

Sometimes shooting isn't necessary, however, and that's a good thing, as there isn't enough ammo in the pen to pay everyone

back. Melee combat is as versatile as it is ultraimmersive. You can turn a guard's own gun on him with a counterattack, shank him with a homemade shiv, snap his neck with your bare hands, or drop down on his head. Blood sprays and heads snap back like bails on short strings when you practically punch holes through them, and your screen shudders in a sort of visual shorthand for vertigo when you get what you give. Only the awareness that you're manically pecking at mouse buttons pulls you out of the experience.

Stealth play is seamless, too. Instead of having your HUD tell you that you're hidden (aside from small health bars that appear when you're hurt, there are no onscreen indicators for anything), your surroundings turn a bluish tint. Combine that with the power to see in night so black that it'd drive normal men to tie ropes around their wrists, and you can squeak through whole sections without firing a shot (provided you don't mind some tiresome trial and error).

TIME OFF FOR GOOD BEHAVIOR

Model prisoner? Maybe. *Riddick* never manages to throw off all the shackles of first-person shooting, but before the clichéd crate- and barrel-blasting bits can bore you, the impeccably paced plot puts something fresh in your sights. Its brevity is where the game comes the closest to dropping the soap—a hair-trigger finger can blaze a path to freedom in eight hours. Even so, you'll find a stay of execution in the supercool, unlockable commentary mode (hence the latter part of *Riddick's* ridiculously long title) that takes you on an interactive behind-the-scenes tour while you play. **Shawn Elliott**

Verdict ★★★★★

Short, but sweeter than a pack of cigs and a clean pair of undies.

You can turn a guard's own gun on him, shank him with a homemade shiv, snap his neck with your bare hands, or drop down on his head.

DEVELOPER: Ubisoft GAMES PUBLISHER: Ubisoft Montreal GENRE: Action ESRB RATING: M REQUIRED: Pentium III 1GHz, 256MB RAM, 2GB install, 64MB videocard

Prince of Persia: Warrior Within

Faster, Warrior! Kill! Kill!

For a while, there was talk that *Prince of Persia: Warrior Within* was going to be titled *Prince of Persia 2*. This would have been strange indeed, since *Warrior Within* is actually the fifth, not the second, *Prince of Persia* game—the second, released in 1993, was already called *Prince of Persia 2*. Sensibly, the plan was scotched. But the fact that it was even considered tells you something about the mindset of the people making the game.

DJ JAZZY DEATH AND THE BUFF PRINCE

In designing *Warrior Within*, Ubisoft seems to have decided it'd attract a wider audience by expanding on certain aspects of the game's immediate predecessor—2003's *Prince of Persia: The Sands of Time*—that were new to that game, rather than on the core elements that made the series popular in the first place. For example, though all the *Prince of Persia* games have offered a combination of exploration and combat, *The Sands of Time* gave an abnormal amount of attention to the combat—over and over, the game would stop dead while you were

forced tediously to fight off a horde of enemies. In *Warrior Within*, the combat is more varied, but it's also more complex, harder and more violent, and there's more of it. The result is that *Warrior Within* is the first *Prince of Persia* game to feel like a combat game with interludes of exploration rather than an exploration game with interludes of combat.

The Sands of Time also broke out in a new direction by changing the title character from a classical hero of the *Arabian Nights* mold into a hipster youth, com-

❑ If you've been longing for a *Prince* game with naked butt cheeks, your prayers are answered.

❑ Insert blade in bad guy's mouth...

❑ ...and rend violently.

Decapitation, the quickest way to an M rating.

plete with goatee and sassy attitude. *Warrior Within*? Well, the goatee is toned down, thank God—but the character's attitude is more obnoxious than ever, and so is the game's. One particularly annoying example: The game's soundtrack frequently abandons its period-appropriate Middle Eastern melodies for jarring forays into heavy metal-style rock.

So, clearly what I am trying to say is that I hated the game, right? Actually, no—I liked it quite a lot. But I liked it in spite of its considerable flaws, not because it didn't have any

THE ART OF WAR

What is it that makes up for the flaws? Principally, the fact that if you turn the sound off and cheat your way through the tougher fights (just do a Google search; you'll find the cheats), *Warrior Within* offers something no other current game does: namely a lush, visually compelling environment and a character with astonishing acrobatic skills who can traverse the environment with gravity-defying exuberance and grace.

Path interrupted by a chasm? Not a problem—just run sideways along the wall to get to the ledge on the opposite side. Need to get from a high balcony to the floor of a room 50 feet below? Simply stab your sword into the fabric of a hanging tapestry and hold on as you slice your way to the bottom like Errol Flynn in *Captain Blood*. The controls are fluid and easy to remember—you'll find yourself tumbling, shimmying, balancing, climbing, leaping, and swinging like a pro in no time. (This is in contrast to the combat system, which requires you to memorize combination attacks that demand the manual dexterity of a Segovia.)

Then, too, the game's settings are eye candy of the first

This would be a bad guy—a very, very bad guy.

So, clearly I hated the game, right? Actually, no—I liked it quite a lot. But I liked it in spite of its considerable flaws.

order, and thanks to a time-travel twist, the story allows you to see many of them in two different states, both as ruins in the present and at their opulent peak in the past. The time-travel story line also leads to some clever puzzles, since you can sometimes solve problems in the present by changing something in the past.

Are these largely visual pleasures enough to make up for an incomprehensible story, an unlikable main character, an annoying soundtrack, gratuitously savage

bloodletting, and (just for good measure) the occasional crash bug? Yes—but just barely. The next time around, I, for one, would like to see Ubisoft turn back a little toward the series' roots. In other words, the next game should be *Prince of Persia 6*—not *Prince of Persia 3*. **Charles Ardal**

Verdict ★★★★★
Gorgeous and exhilarating, though needlessly gory and combatcentric.

You'll still kill hordes of baddies.

Now with bigger swords for deader enemies!

PARENTS JUST DON'T UNDERSTAND

There's also some mild, silly, yells, sound-erally, eringly, on Vol 1.

Armies of Exigo

EXTRA

development studio in Hungary, are obviously fans of old-school RTSes. And while at first glance it might seem that this is all a sleepy Eastern European rethread, the truth is deeper than that. Calling it an homage, an interpretation, a clone, or even a rip-off doesn't change the fact that it's a damn fine game.

You've got three races here, all as derivative as they've always been: medieval humans, orkish monsters, and gooey chitinous insects. They play very differently from each other, and they each have enough variety that the same race can

This is hard to appreciate in the single-player campaigns. The scripted missions dutifully dole out new units, introducing them one by one as an inconsequential story progresses, complete with heroes featuring unique powers and silly names. But in multiplayer games or skirmishes against the brutal A.I., *Armies of Exigo* is a muscular exercise in the importance of strategic thinking.

To be fair, there are plenty of unique elements in *Armies of Exigo*. There's a sub-game involving invisibility in which you can see invisible units, but you can't attack them unless you have a detecting unit. Flying is handled differently for each race, which affects what parts of a map you can

A human base.

Attack of the flying octopi.

Keep your enemies close and your buffalo even closer

die. Veteran human units extend powerful auras to nearby units, but you'll have to keep a priest standing by to quickly revive them if they die. Insects accumulate "hive" experience that applies to all their units.

The interface is comprehensive and slick, with all the requisite hotkeys and information displays. There's a selection menu of 15 units, but you can put unit groups into "super-groups" that arrange

themselves in formation and allow for massive armies marching and fighting together. The pathfinding and tactical A.I. are top-notch, and many of the spells can be set to autocast to minimize micromanagement during battle.

For something that looks so good, *Armies of Exigo* is visually uninspired. And the sound is laughably weak, as if the developers didn't quite have enough time to get around to doing that part of the game. But when it comes to what counts—gameplay, variety, balance, A.I.—*Armies of Exigo* is good enough that it doesn't need to be unique. Tom Chick

Verdict ★★★★★

Armies of Exigo proves that derivative is not necessarily a dirty word.

reach. Many maps have a separate underground area that sometimes interacts with the surface in the form of units or spells that can transition between the levels. Each race also accumulates experience differently and has different options for keeping veteran units around. Beast units, for example, earn upgrades with experience and can be resurrected at an altar if they

Calling it an homage, an interpretation, a clone, or even a rip-off doesn't change the fact that it's a damn fine game.

BUFFALO SOLDIERS

Here is just one example of the choices afforded by *Armies of Exigo*'s clever design: The beasts' army size isn't limited by farms, but by their collection of borons, big, slow buffalo created at a stable. A typical beast player will have a growing herd off in some protected corner of the map. However, borons can be sacrificed to heal beast units. What's more, the beast missile unit is a weakly goblin with a boomerang. These guys are more annoying than deadly for how little damage they inflict. However, goblins can ride borons, resulting in a missile unit that doesn't do much damage but has a ton of hit points; the trade-off is that your "ferns" are now vulnerable. This is a small price to pay for an army of buffalo ridden by cackling goblins flinging colorful boomerangs.

PUBLISHER Ubisoft **DEVELOPER** GSC GameWorld **CENTRE** Strategy first **REQUIREMENTS** **REQUIRED** Pentium 4 1.5GHz, 512MB RAM, 2GB install, 128MB videocard, broadband connection for online play **RECOMMENDED** Pentium 4 2GHz, 1GB RAM, 256MB videocard **MULTIPLAYER** Internet (2-6 players)

Alexander

From crappy movies come crappy games

Alexander the Great conquered the entire Eastern Hemisphere in his early 20s. He wasn't named "The Great" for nothing. In fact, it can be argued that Alexander's military acumen and battlefield leadership have yet to be replicated. And they certainly aren't replicated—or even approached—in Ubisoft's RTS game based on the recent Oliver Stone movie. Any hope that this game might have delivered a challenging, inspired-by-greatness RTS is lost in a mediocre combat model, an unintuitive interface, and worthless A.I. Not to mention the headache you'll get trying to install the game with an optical rewriter drive or trying to retrieve lost saved games.

CONQUEST MADE STUPID

Alexander's game engine feels like a dumbed-down version of GSC GameWorld's *Cossacks* and *American Conquest* RTS titles; both resource management and combat tactics are paid lip service at best. In this game, Alexander carves out his empire in a 16-mission single-player campaign, but there is nothing unique here. Scenarios follow a simple pattern of building, defending, or saving the town, combined with the occasional search-for-relics mission and fending off enemy hordes. While your troops march across the map, your peasants get the thrill of managing grass growing, rock collecting, and tree trimming until your empire expands. More annoying is the all-or-nothing unit production—unit production buildings are either on or off, spewing out units until you scream and stop them. There's no way to queue up limited production in order to stop barracks from churning out units or the town hall from pushing out peasants. If you're not paying attention, you could easily find a huge group of 25 to 30 workers milling around doing nothing because you were temporarily distracted—by maybe, oh, let's see, fighting—and unable to take the time to shut down the constant production.

Although *Alexander's* 3D detail is graphically better than *Cossacks'* or *American Conquest's*, the interface makes it difficult

❑ The big battles may look like a *Total War* game, but the lack of meaningful tactics means they're anything but.

to manipulate the environment. For instance, workers sometimes don't follow orders, so trying to click on them to put them in the right spot is an exercise in futility. On the positive side, when you finish the main Alexander campaign, you unlock three minicampaigns pertaining to the Egyptian, Indian, and Persian kings (Nectanebo, Poros, and Darius), which can make things more interesting once you get past the marginal game mechanics.

SHOCK AND BLAH

Battle is *Alexander's* main draw, so resource management isn't as important as rushing your troops into fights. The developers claim battles as high as 64,000 units, although only 8,000 can be viewed onscreen at once. Though I never achieved this incredible number of units, I did attain an impressive mass of 10,000 Egyptian archers, chariots, slingers, and priests—who ran smack into grouping and control issues. Epic battles can be large and vibrant but lack any form of tactical punch since winning the battle is more a result of mass and aggression than tactical coordination.

Alexander also includes a bonus historical map, movie and soundtrack clips, and an interview with the gifted composer,

❑ Look, there in the lower-left corner—it's a blond Colin Farrell! That wig doesn't look any better here than in the movie.

❑ Workers stand idly by. Thanks, guys, thanks a lot.

Vangelis. Unfortunately, none of these items can save this *Alexander* from eventual defeat. ❑ **Raphael Liberator**

Winning battles is more a result of mass and aggression than tactical coordination.

Verdict ★★☆☆

If you loved the Oliver Stone movie, then you'll love this game. Everyone else should play *Rome: Total War* and rent *Gladiator*.

PUBLISHER: Electronic Arts **DEVELOPER:** Electronic Arts **CORE SPORTS ENGINE:** EA GAMES **REQUIREMENTS:** Pentium III 700, 256MB RAM, 1.5GB install, 32MB videocard
RECOMMENDED: Pentium 4 2GHz, 64MB videocard **MULTIPLAYER:** Hotseat, Internet (2-4 players)

NBA Live 2005

Hoop-la?

An impressive, perhaps even excessive, number of the hip-hop artists featured in Electronic Arts' *NBA Live 2005* begin their thumping, bass-laden sermons by referencing both EA and *Live* itself. The message is clear, if not outright tattooed on the bodies of the electronic basketballers contained therein: This is important. Yo.

EA wants it to be important on the court, too. Marv Albert—the cross-dressing, back-biting phoenix who resurrected his career from the ashes of a sex scandal—and Mike “The Czar” Fratello call the action. There’s a slew of NBA all-stars from the 1950s on up, allowing Bob Cousy to pit his magic against that, say, of Earvin Johnson. The new All-Star Weekend fleshes out the sport to include its flashiest accoutrement, the slam-dunk competition.

For the most part, EA has succeeded in its efforts. The minutiae of the game—the squeaking of the court, the jostling between offensive and defensive players, and the crowd reactions—are deftly handled. This is perfectly acceptable, as *Live* also gets the very important stuff right. Nimble guard Jason Kidd dives for loose balls. The towering Yao Ming plods to the hoop. The Utah

Jazz is like the *Lusitania*, only with more sinking and less historical significance.

Tiny improvements have also been made to solidify play over last year’s iteration. The power-hop offensive move is now more easily countered, and steals are no longer a given. These improvements, combined with a fairly deep in-game play-calling system allowing players to execute various zones, traps, and presses while the clock ticks down, serve to make *NBA Live 2005* deeper and certainly less reliant on the exploitation of the game’s weak spots.

A neat revamped dynasty mode offers the chance to guide a team for a quarter century. It comes complete with the curse of the 21st century, a beeping, booping bastard of a PDA that never fails to bring news of a

Soar, Carmelo! Soar like a bright blue beautiful bird!

bum-kneed power forward or a message from the owner asking why his messages have not been read. Here, those predisposed to micromanagement can squeeze out orgasm after orgasm managing budgets, selecting play styles, reading e-mails, scouting, wheeling, dealing, and scheming.

The humbling slam-dunk competition attempts to cement EA’s street credibility but fails. It’s just too unoriginal to be considered anything other than a flashy extra. And the message is clear: important, yes. Perfect? Not quite yet. **—Greg Orlando**

Verdict ★★★★★

What’s a basketball metaphor for a mediocre effort?

NHL Eastside Hockey Manager

The puck drops here

The NHL Eastside Hockey Manager is a simulation game that allows you to manage a team in the National Hockey League. The game is set in the year 1990, and you are given the task of rebuilding a team that has been relegated to the bottom of the league. You can draft new players, trade existing players, and make strategic decisions throughout the season.

The game is a simulation of the NHL, and it is designed to be a challenging and realistic experience. You will need to make tough decisions about which players to draft, which players to trade, and which strategies to use on the ice. The game is a great way to experience the excitement of the NHL from a different perspective.

CLONE WARS

Nvidia turns up the heat with the compact GeForce Go 6800 videocard

Three hefty 17-inch notebooks enter, and one lightweight videocard leaves with top honors. Each notebook in our LAN-

ready roundup—Widow PC's Sting, ProStar's 9095-1B, and PC Laptop's Annihilator 987—arrived possessing Nvidia's new GeForce Go 6800 PCI Express graphics solution, and it was this component that stole the thunder from the laptops. Why? Because of great performance—and the fact that all three of these machines are practically carbon copies of each other. The only real deviation in the three comes in the Annihilator 987's heftier price—but that comes with a lifetime warranty the others lack.

I put all three laptops through their benchmark paces, trying to get them to hurl their gaming guts. When the smoke finally cleared, the Nvidia GeForce Go 6800 kept them in great form. This little notebook gem comes with 256MB of GDDR3 RAM, and it packs a wallop with 190 million transistors, six vertex pipes, a 275MHz engine, and 600MHz memory clocks in the 12-pipe variant (a 16-pipe version is forthcoming). Simply put, the performance bar for notebook gaming just rose.

And the timing couldn't be more perfect for Nvidia, since video-intensive games like *Half-Life 2* and *Doom 3* are

WWW.IBUYPOWER.COM

The GeForce Go 6800 is a killer graphics choice for mobile gamers

range (HDR) lighting render feature, which the Go's 64-bit blending modes can handle, though at dramatically reduced frame-rates. Basically, you'll simply have to tweak *Far Cry's* settings just a bit to experience each level's

ics scaling since thermal and power bottlenecks keep things more or less CPU focused. Perhaps the thermal and power concerns of the GeForce Go 6800 Desktop Replacement configuration (DTR), which boosts higher 450MHz/1.2GHz clocks, will be overcome.

Thermal questions aside, this is a killer graphics choice for mobile gamers wanting to go with the best. In an arena once dominated by ATI, Nvidia now has the edge in the mobile gaming sector, but it will be interesting to see how well the ATI M28 design fares against the GeForce Go 6800. But for now, Nvidia rules the roost, making all three of these laptops the talk of the LAN party.

causing many notebooks to wave the white flag in surrender. Compared to a top-of-the-line Alienware laptop released just five months earlier, all three of these dominated, posting *Doom 3* scores 30 to 40fps better than Alienware's. These look-alikes are able to do this for three reasons: Intel Pentium 4 processors, 60GB SATA hard drives, and GeForce Go 6800 PCI Express videocards. The high frames were especially evident in *Doom 3*, since its shadow- and light-filtering algorithms are built into the GeForce Go 6800's architecture. Nvidia also pushes the graphics pipeline with its DirectX 9.0-friendly Pixel Shader Model 3.0, UltraShadow II, and CineFX technologies where vertex, shadow, and pixel shaders boost the performance and quality of images on the screen, as aptly demonstrated again in *Doom 3*.

All three laptops ran *Half-Life 2* flawlessly, with every character and object rendered in crisp detail. *Far Cry* fans will be happy to know that the 1.3 upgrade patch offers the high dynamic

gorgeous imagery. Each laptop sports a 17-inch superwide 1680x1050 WSXGA+ LCD screen perfect for playing *Rome: Total War* or watching your favorite DVDs.

Though the GeForce Go 6800 comes with PowerMizer 5.0, the NV40's transistor-heavy architecture does heat up the laptop during a 3D game session. This should give overclockers pause. Interestingly, overclocking the Go resulted in very little increase in graph-

REVIEW Sound Blaster Audigy 2 ZS Notebook PC 317

PERFECTING SURROUND SOUND

Creative brings quality sound to notebooks

Experience the same 24-bit-quality sound from your notebook that you've come to love from your gaming PC: the Audigy 2 ZS Notebook slides right into your lone PCMCIA slot

and delivers the same Dolby Digital EX, DTS-ES, and THX surround-sound standards of its desktop PC Audigy 2 ZS brother in both 5.1 and 7.1 channels. It also covers EAX 2.0, DVD-Audio, and ASIO 2 standards, so nothing is lacking in the feature list; its signal-to-noise ratio of 104 decibels gives the percussion from the Blue Man Group DVD a bold and deep bass sound. It also plays the ambient game audio from *Joint Ops: Escalation*, *Half-Life 2*, and *Home: Total War* flawlessly through its hardware-accelerated EAX mode. The card

renders the sound and spatial effects of both combat and map environments nicely on the laptop, without a hiccup in performance.

This little analog soundcard packs a lot of punch, thanks to plenty of I/O slots. It provides a combo S/PDIF/headphone output, which combines the optical output with a headphone jack and a mic/line input. The only omissions from its PC counterpart are the MIDI connections and S/PDIF connection to a faxed.

However, this is a small price to pay for such utility and functionality in such a tiny piece of hardware. If you want the

FACT CHECK D-Link PRODUCT DGL-4300 GamerLounge Wireless Gaming Router PRICE \$100

DGL-4300 GAMERLOUNGE WIRELESS GAMING ROUTER

High-octane LAN gaming

GameFuel? Try to remember this catchy new D-Link term, because it's going to become a household word for gamers wanting the most lag-free performance from a router. D-Link's new GamerLounge wireless router incorporates the coolest

networking features, game-specific performance (letting you set up protocols for specific genres or even specific

games), and then some.

You won't be able to resist its sleek, stylish casing, blue LEDs

interface makes configuring the router a snap. The gamecentric GameFuel feature alone sets the bar for excellence in multi-player gaming. GameFuel fine-tunes dedicated throughput and prioritized network trafficking via the upstream even while other heavy data-transfer loads occur. This reduces latency in a big way.

With the GamerLounge router, security is less of a concern since the Stateful Packet Inspection (SPI) Firewall filtering, NAT, VPN, Access Control, and a variety of Wi-Fi protection such as WPA and WEP keep your computers safe from intruders. As a bonus, D-Link strategically puts itself on the gaming map by offering its game-playing customers their very own support website at <http://games.dlink.com>.

If you are serious about eradicating lag and crave the very best networking gear, then the DGL-4300 GamerLounge Wireless Gaming Router with its Atheros Super G chipset is more than worth the hefty price tag. **Raphael Liberatore**

SCORE: ★★★★★

and small footprint. Beyond the good looks, the GamerLounge router delivers innovation starting with the amazing raw speed of four autosensing Gigabit Ethernet LAN ports in addition to a wireless LAN moving past 100Mbps that makes lag a thing of the past. Its robust

FACT CHECK Belkin Wireless Pre-N Router PRICE \$159

BELKIN WIRELESS PRE-N ROUTER

Pre-N means "preview network"

Belkin is the first manufacturer to jump on the MIMO (multiple input/multiple output) networking bandwagon. Well, sort of.

The product's name doesn't say "Pre" for nothing. For those who have had their heads in the mud, MIMO uses a single channel for multiple data streams using the upcoming 802.11n standard. MIMO promises to make Wi-Fi bandwidth really fast. For now, you'll only gain überrange and speed benefits when using Belkin's Pre-N adapter (see notebook sidebar) in conjunction with the router. For the maximum potential of this technology, you'll have to wait until the 802.11n standard is rolled out in 2006.

Meanwhile, Belkin offers just enough of a performance upgrade to whet your appetite. Friendly to both the 802.11b and g standards, as well as other wireless product brands, the Pre-N has three antennas that help it provide excellent coverage and range, which make for strong wireless propagation. Interference is less of an issue due to strong coverage provided by its Airgo chipset, which also keeps your wireless

speed from dropping to the lowest protocol.

Belkin's router also offers the typical state of security and firewall protocols, however, it does lack the Wireless Distribution System (WDS). Perhaps Belkin feels the Pre-N's giant range makes WDS obsolete. As a matter of fact, none of the routers we tested came close to matching the incredible range of the Pre-N. Belkin also offers a great lifetime warranty and 24/7 toll-free tech support. If you want both backward- and forward-compatible access to the Internet from long distances, and you want to stick with Belkin's quality name, the Pre-N is your ticket to the future of "N."

USR5470 54Mbps WIRELESS NETWORK STARTER KIT

Tech Commando

Commo from the hardware front lines

LAN-tastic journey

My first LAN party was a simple gathering by today's standards. My brother, an Army buddy, and I networked three Macs, then spent 12 straight hours fragging each other in Bungie's shooter classic, *Marathon*. LAN gaming soon became such an obsession that no matter how hectic my day was at the range, killhouse, or DZ, I always looked forward to spending time fragging my brother across our little Apple network.

Later, my LAN-party network grew. I invited a number of family members, friends, and even Robert Coffey, all with rigs in tow, to the newly formed Cave. Back then, we spent the better part of the day fixing the network. Hours later, we got everyone handshaking and spent the rest of the night playing *StarCraft*, *Quake*, *MechWarrior*, and even *You Don't Know Jack* until the wee hours of the morning. After the cigar smoke settled and everyone packed up their computers and left, I wondered if our LAN gathering was a freak occurrence.

It wasn't. LAN parties began popping up everywhere, and I had a front-row seat to watch it explode into a phenomenon. This is the very reason why I created the Cave, my very own LAN party command post. From humble beginnings, I've managed to accumulate more than 35 top-performing PCs and Macs (including my Mac gaming servers), networked using two cable modems with guaranteed Überfast throughput. It's gaming nirvana for those who visit. On any given day you can find several gamers—mostly friends, military buddies, and my brother—stopping in to play their favorite LAN games. Thankfully, my academic wife has found a way to make peace with my transforming our garage into the digital equivalent of the local pool hall. Even if you can't re-create the Cave, I cannot encourage you enough to start your own LAN party group. You'll find yourself addicted—just like me.

✉ Raphael Liberatore

ATI FACTOR: ATI Radeon X850 XT Platinum Edition 256MB GDDR3
PCI-Express VPU PRICE: \$549

RADEON X850 XT PLATINUM EDITION PCI-EXPRESS

Plenty of power, but at a premium

Am I alone or have you, too, grown weary of the graphics card war between ATI and Nvidia? ATI and Nvidia fight like cats and dogs, and we consumers get all scratched up in the middle of the fray. Yeah, we appreciate the ever-evolving cutting-edge graphics produced by the competition. But trying to keep up with blisteringly fast cutting-edge performance can lead to financial ruin.

Such is the case with the Radeon X850 XT PE. ATI took the obligatory next step in the graphics card war by improving the process for tweaking its 800 series card's

core and memory clocks just enough to gain a nominal edge in graphics performance over the competition. This was evident in our *Far Cry* and *Half-Life 2* benchmarks, where the X850 XT outperformed both its X800 XT sibling and the Nvidia 6800 Ultra by 10fps or so, running at 1280x1024 resolution with 2x AA and 4x AF enabled. According to our 3D GameGauge "Lite" benchmark, the graphics card top dog honors now reside in ATI's court. But is the upgrade worth

losing a PCI slot and gaining only a few extra frames in *Doom 3*? Only if you've got to have the best...and have deep pockets. **Raphael Liberatore**

SCORE: ★★★★★

GIGAEXPRESS DGS-1008D 8-PORT GIGABIT SWITCH

10/100/1000Mbps auto-sensing, 16Gbps forwarding capacity

Do you want to build a high-performance gaming network? Then scrap the hub and pick up a switch. Instead, if you're really serious about building a performance network, then go for a D-Link Gigaset Express 8-Port 10/100/1000Mbps auto-sensing Gigabit switch that will start you on your way to the perfect gaming LAN.

Why ditch the hub for a switch? A network hub and switch are similar in that they are multiport devices for connecting more than one computer to an Ethernet LAN. But where a hub sends duplicate packets to each port (thus sharing everything with other segments of the LAN), a switch deftly manages network traffic by filtering and forwarding packets to the appropriate segments of the network. This ultimately increases the bandwidth speed across the LAN while easing network congestion. Using a switch like the D-Link 8-Port Gigaset Express increases throughput speeds to more than three times that of

10/100 switches

The D-Link 8-Port Gigabit Switch is easy to install and features a nonblocking switching architecture and flow control at 16Gbps forwarding capacity for maximum throughput and reliable data delivery in full duplex mode. Autonegotiation ports matched with MDI/MDI-X crossover eliminates the need for crossover cables on uplink ports, while it senses and adjusts the link speed of every attached network device—whether

10, 100, or 1000Mbps. Yeah, it's a lot of mumbo-jumbo, but what it all boils down to is this: If you want fast LAN speeds, then the D-Link GigaExpress Switch is a very good option. **Raphael Liberatore**

SCORE: ★★★★★

Zolman PRICE: \$50

ZM-R56F THEATER 6
HEADPHONES

You're hearing things

Zolman may be best known for manufacturing top-notch cooling products for your PC, but its expertise isn't limited to heat sinks, CPU fans, and power supplies. The company also makes some of the slickest audio headphones in the industry, with the Theater 6 headphones setting the bar for premium high-fidelity sound for gaming. Everything about the Theater 6 headphones is unique, including their compact design and lightweight comfort. As a matter of fact, deep into a playing session of *Joint Ops: Escalation*, I forgot I was wearing them.

The reason comes from how well the Theater 6 headphones' electrodynamic-type micro speakers translate the intricate in-game sound experience for gaming, movies, and music. Jump into *Half-Life 2* and you can literally feel the discreet localization of every enemy.

The Theater 6 headphones set the bar for premium high-fidelity sound for gaming.

nuanced sound. Jack into the *Matrix* DVD and you'll hear impressive channel separation and some characteristics specific to the sonically complex Dolby Digital 5.1 surround sound. Immersion with an increasing barrage of pure power music sound. Great too. The tonal balance of Jeff Southern's malevolent, matched beside her brilliant piano. Across as both natural and inviting. The lack of volume control on the headphones is the only drawback here. Otherwise, the surround sound quality produced by the Theater 6 headphones is just phenomenal. **—Raphael Liberator**

SCORE: ★★★★★

GEEK SPEAK

Networking mumbo jumbo decoded

A LAN is basically a collection of personal computers (nodes) connected together via a network and able to communicate with one another. Developed in the 1970s by Xerox, in collaboration with DEC and Intel, a LAN supports anywhere from 10 (10Base-T) to 1000 (Gigabit) Mbps (megabits per second) transfer rates and is usually within a relatively small area, such as a building. There are a number of LAN types, with Ethernet being most common for gaming.

A major networking protocol for TCP/IP. When two hosts exchange data, TCP controls data and packet delivery, then directs them in the order they were received.

The unique hardware address identifier possessed by each node or computer connected to the network.

Part of the IEEE technology which specifies a Wi-Fi (wireless fidelity) or over-the-air interface between wireless clients and/or base stations across a LAN. The 802.11g protocol provides twenty-plus Mbps transmission speeds in the 2.4GHz band under either the frequency hopping spread (FHSS) or direct sequence spread (DSSS) spectrums.

Megabits or megabytes per second is a data rate measurement detailing the transmission speed from one computer or device to another.

CHRONICLES
OF EGGBERT

A-LIST

96

Inside

So we lied when we said you'd never see another Intro paragraph here. Because of your overwhelming response to last month's ultimatum (200 emails and counting), we've put together another rockin' Killer Rig and A-List, and a blow-by-blow guide on how to become a master strategist in *Kohan II: Kings of War*. There's even another installment of the Chronicles of Eggbert, the continuing adventures of Jeff Green's hapless yet lovable gnome through *World of Warcraft*.

Killer Rig

Built to move, priced to shock

P This month's Killer Rig was once a blazing-fast small form-factor performer from Maingear.

However, time has turned this former LAN-party gem into a bookend for two dozen Army field manuals and old history books. Still, the X-Cube had decent-enough guts for at least another year or two of gaming, so the decision to upgrade this computer for extended LAN fun was an easy one. When upgrading Shuttle-based XPC rigs like this Maingear or the original FragBox, space, overheating, and power consumption have to be taken into account. Choosing the wrong type of components could make for a very bad outcome. It can also make an expensive proposition even more expensive.

The first item out was the 220-watt power supply, replaced by a 300-watt micro-ATX solution from Ahanix. This allowed me to swap the ATI Radeon 9600 XT 128MB DDR RAM videocard with the Radeon X800 PRO 256MB DDR RAM board. Thankfully, Maingear's Shuttle SB65G FB65 motherboard with 800MHz frontside-bus capability allowed

me to upgrade the original Pentium 4 2.8GHz processor to a P4 Prescott 3.4GHz CPU. Since the Shuttle's XPC casing offers an extremely limited cooling space, I upgraded the Northbridge heat sink with one made by Zalman. I also swapped both PC3200 256MB RAM sticks with two 1GB sticks of PC3200 40MHz from Kingston for dual-channel memory

X-CUBE UPGRADES

TOTAL COST		\$2,038

Choosing the wrong components can make for a bad outcome.

performance, and I ditched the Seagate Barracuda 80GB SATA HDD for Seagate's 200GB SATA variety. Finally, in order to make it LAN ready, I replaced the old CRT monitor with Phillips' Brilliance 19-inch LCD for portability, and then swapped the Microsoft optical mouse and keyboard with a delicious Razer Diamondback optical mouse and Logitech MX wireless keyboard.

Before benchmarking the upgraded X-Cube, I made sure not to over-clock the CPU, as it already runs at a hot 50 C-plus temperature with the new components (48 C before upgrade). *Halo* scores leapt from 38fps to 67fps at 1280x1074 using 2x antialiasing and 4x anisotropic settings. *UT2K4* also jumped about 25 frames to 79fps. This LAN beast is ready to rejoin the party.

The latest and greatest gadgets you gotta get

BY J.R. www.fossil.com PRICE \$200

FOSSIL WRIST PDA

U The idea is great: All the information on your PDA, but strapped to your wrist. Using Palm OS and 6MB of internal memory, this relatively unassuming watch can stash all your contact info. Geek gear this hardcore usually comes with a sign saying, "PLEASE KICK MY ASS!" Fortunately, it isn't as obtrusive as Fossil's other recent tech-watch effort (the data network Wrist.Net watches that feel as though you're tethering a radioactive weight to your arm), and the built-in watch program lets you change the watch's face every day of the week. Bet you can't do that with your timepiece.

We came up with only one downside: Between watch recharges—you need to plug it in every three to four days—our watch had a "fatal exception error." That's right, our watch crashed...but we're still not ready to go back to a wind-up.

BY www.seagate.com PRICE \$170

SEAGATE POCKET HARD DRIVE

U USB flash drives are handy, but they haven't been big enough—until now. With 5GB just waiting to be filled, your ass is now officially covered with the beefiest USB drive yet.

It may be about the size of a hockey puck and made rugged to absorb some shock, but this portable hard drive isn't meant for roughhousing, as if you're gonna try to beat the hell out of your data, anyway. An ice-blue light blinks when the drive is active on your PC or Mac, and being a USB 2.0 device, drive access is quick. At first we were stumped about what we were gonna do with all this space at our disposal. After stashing every important document and basic file you'd need to install on a fresh machine, there were still well over 3.5GB left to fill—plenty of room for videos, MP3s, and save-game files. For anyone jockeying between computers, this is the ultimate backup.

Fast Forward

Welcome to Fast Forward, CGW's monthly back-of-the-book hodgepodge of all things PC-gaming related. Every month, we'll offer up a handy reviews index, a few editors' picks, and whatever else we manage to think of.

GAMER'S EDGE: KOHAN II

Those sweethearts at TimeGate want you to succeed. How do we know? They kindly provided us with the following *Kohan II* strategy guide. Yep—tips straight from the developer. We'll thank them for you.

EARLY GAME: RAISING YOUR KINGDOM

The first 10 minutes of a skirmish game in *Kohan II: Kings of War* are very important. The following tips assume that you're playing on an unexplored random map, but most are still useful if you're playing on a preexplored map.

SCOUT, SETTLE, AND SCOUT SOME MORE

When the map begins, recruit at least one scouting company as soon as you can. Obtaining some scouts usually takes precedence over building expensive structures like markets. Remember that faster units and units with trailblazing or recon make good early scouts. Cavalry are great for early scouting but settlers are surprisingly cost-effective scouts as well. You can kill two birds with one stone by using your settlers to scout camps for slower units.

Even once you've obtained your second settlement, don't stop scouting. Keep scouting aggressively and consider recruiting more scouting units to keep up the pressure. During the first 10 minutes, you are going to want to explore as much of the map as possible.

LAIRS FIRST, UPGRADES SECOND

Lairs provide a gold reward when destroyed, and this reward money can play a big part in your kingdom's early economy if budgeted well. By recruiting a couple extra early companies to scout and find lairs, you can earn back your initial investment and deprive your opponent of lucrative rewards. Hitting a lot of early lairs also earns you extra experience for your *Kohan* heroes. By skipping a settlement or structure upgrade, you can often afford to recruit an extra company that can earn back its initial cost after clearing only one or two lairs.

Here, two raider companies team up to hit a rhaksha hive. The gold reward from this lair alone will pay for one of the raider companies.

KNOWING WHEN NOT TO SETTLE

Before you decide to settle on a spot, keep in mind how close it is to the enemy. It is often not worth settling if it's on a spot right next door to the enemy. Scouting pays off big here, because the more you know about the map, the more likely you are to know where your enemy is situated. This, in turn, lets you know which settlement spots are safe to settle and which ones will be defensive nightmares. Even though it is tempting to settle on every spot or settle on the closest spot, keep in mind how easy that spot will be to defend before you settle.

MIDDLE GAME: TACTICS TURN THE TIDE

Once you've mastered the first 10 minutes, it's time to start improving your tactics. Assuming you can stay on roughly equal military footing with your enemy,

With the druga, two raider companies and one settler company make a perfect early force. This army is fast, easy to support, and can tackle most lairs.

it will be superior tactics that decide the victor.

COMBINED ARMS

As you move into midgame, your number of military options expands, and you must make some hard recruitment choices. If the distance between settlements is small, infantry will shine. If the distance is far, you'll need more cavalry. You can toss in some support units, siege units, and archers to improve your firepower. For example, a company of swordsmen supported by clerics is good, but it is too expensive to put clerics in every company until very late in the game. Backing a supported company with several unsupported companies will help you maximize the cost-effectiveness of your army. Use your tough, expensive companies to lead the charge while using cheaper companies to flank, raid, and entrench to defend settlements. Just one company of unsupported light cavalry can make an excellent flanker for a primarily infantry army.

Here we have two swordsmen companies with one cleric supporting each. Backing the swordsmen are some engineers and one plain lancer company. Use the swordsmen as your main attack force while the lancers and engineers scout, flank, and defend.

In this city, sell off the barracks and market and disband the pioneers for a sudden boost in gold.

ENTRAP AND ENCIRCLE

If you have managed to stay on relatively equal military footing with your opponents, you're going to have a hard time capturing a settlement. In this situation, it can often help to lure your opponent into attacking while you prepare a devastating counterattack. If you know where your opponent is going to strike, which is often your closest settlement to him, be prepared to let him attack.

Do not position your army inside the settlement; position it outside and out of your opponent's view. When his military comes marching, let him crash the settlement walls. Try to encircle him so the fastest route back to his settlement is blocked by your army. Once the walls go down, charge him with every company you have. If he runs, pick slow or wounded companies and destroy them. If he fights, his army will be split fighting your militia and your incoming defenders. In either case, you will gain a temporary edge and possibly enough momentum to turn around and immediately capture one of his settlements.

TANKING FOR THE WIN

In a pitched match, it takes only one or two extra companies to turn the tide. When this situation arises, you want to be the one with the extra companies. To achieve this, sometimes you need to "tank" your economy, whereby you sell off your resource-producing structures for additional gold. Use it to recruit companies, which you will need to immediately send into the battle. It is not unusual to have a very poor economy when tanking; it is even OK to have a negative economy if you have enough surplus cash to last at least five minutes. Exports, markets, and barracks are prime targets to sell, so keep in mind your tank potential as the battle progresses. The sudden arrival of one to three extra companies can win the day so be prepared to make the sacrifice for a big offensive push or emergency defense.

LATE GAME:
PLANNING FOR THE EPIC

Inevitably, you'll go up against an opponent who can't be beaten without a prolonged fight. When this situation arises, understand that there are special late-game strategies that will come into play.

CAPITALIZING ON TECHNOLOGIES

The importance of technologies grows considerably as the game passes the 30-minute mark. Researching technologies, instead of recruiting additional companies, helps keep your army manageable and allows you to further improve your elite or veteran companies. Technologies also become increasingly attractive as you fill up your structure slots: if you need a stronger front line but don't have room for another blacksmith, consider researching a tech to boost your frontline units instead. It's easy to fall into the trap of constantly recruiting more companies, but don't forget that the larger your army gets, the more practical it is to research techs instead. Once you've got 12-plus companies, you should strongly consider researching technologies instead of recruiting new companies.

THE WISDOM IN RAZING
SETTLEMENTS

An opponent who's on roughly equal terms with you won't let you take a settlement without a fight. Even if you do manage to take the settlement, there's a good chance he will bring in reserves to evict you, or in a team game, a teammate may come to help him retake the settlement. In a situation like this, razing the settlement is often a wise and decisive move. Deploy your troops on the perimeter of the settlement and have them engage any enemy troops that come nearby. Even if your damaged forces can't win, you need to buy time for the workers to raze the settlement. If you deploy your troops wisely, you should be able to cut off any enemy counterattack. You may not be able to capture the settlement, but you can still deny your opponent the use of it.

SIEGE UNITS AND RAIDING

Siege units capture settlements very quickly. This ability allows them to break into enemy territory and capture otherwise "safe" settlements. A few strong frontline companies, possibly just a single veteran or elite one, mixed with a few siege units can crack a town in record time. If your opponent isn't

prepared, you may be able to raze the settlement or hold it long enough to divert him from the real front. This does require you to divert some of your forces, so plan a careful defense while the raid is underway. Entrench your main army at a good spot and be prepared to hold it if your opponent launches a full counterattack. To prevent yourself from being a victim of this tactic, keep a few fast companies around that can respond to attacks behind the main front. If you don't have the companies to respond to the attack, launch a full-out counterattack against your opponent's most valuable settlement. While he may still capture your settlement, you may be able to capture an even more valuable settlement from him.

THE CHRONICLES OF EGGBERT

One gnome's journey through *World of Warcraft* BY IRL GREEN

Sometimes you play to level up. Sometimes you want to solve quests. And sometimes you just kind of feel like being an idiot. For a lot of my time in *World of Warcraft* this month, I was that idiot. Having discovered the train command last month, I continue to derive an unhealthy amount of pleasure from it, especially for a supposedly grown man. I also found that it's even more fun to do when half-naked in a crowd of people (um, in the game). I may not have received any XP or loot for such in-game behavior, but it nevertheless made this vale of tears here on Earth a tad more palatable this month for your humble chronicler.

HOURS 40-60

When not busy being a public nuisance, I managed to climb up to level 21, mostly by solving quests in Westfall and Lakeshire, the latter being my first experience in one of the game's contained worlds. When the threat of a horde attack rained down by other players, I took a break. At one point, I was killed so many times that the news that I finally could pick up the silver to purchase the Unending Breath spell, which lets me breathe underwater for 10 minutes (and is also, oddly, a counterspell to my real-life salami breath). So, like a true hero: when the alarm would go up that a horde invasion was coming, I would dive into the water and hide there until the threat had passed, letting my fellow alliance players get killed instead of me. Yay.

Speaking of water sports, I discovered that one of the Lakeshire quests calls for high-level fishing, so I took a long break in combat and leveling to go fishing all around the "lowbie" game zone. In addition to catching 10,000 fish, I also managed to snag an excellent pair of boots, a two-handed staff, and some shoulder pads, none of which were waterlogged, but also none of which I could actually use. So I sold them all and made a nice chunk of change. Instead, killing and shopping, rather than what it's all about.

Q Woo-woo! All aboard the gnome train! Eggbert gets down in the Ironforge Auction House.

Q I'm happy because I can buy one of my nicer goggles. I need 'em, my old!

Q Gnome! I was by a... born to be...

Q Mini Diablo and Kraknagma (my goldwalker) chill out while I do some fishing.

What do we like at IUP.com? Wouldn't you like to know...

Man, it's pretty cool to have something like IUP.com at our constant disposal. I mean, since we spend most of our time spouting off about one thing or another, it's awfully nice to have a place that's devoted, essentially, to spouting off. Makes us feel a little like we belong to something. You, too, can have this feeling at <http://cgwfans-club.IUP.com>. Try it—you'll like it.

CLUB OF THE MONTH

GMR Fan Club
<http://gmrfanclub-club.IUP.com/>

This month also marks the end of an extremely successful two-year run for our sister publication GMR. This one's for you, guys—we'll miss ya!

STUPID PICTURE OF THE MONTH

WE THINK THIS PICTURE REALLY DOES SPEAK FOR ITSELF.

WHAT'S UP WITH IUP?

A few words from IUP.com's editor-in-chief

I've been working at IUP.com for a while now, and I've started collecting a lot of links to the club (http://linktotheclub.IUP.com). You know those hilarious e-mails that get forwarded around and around the office each day? They make the day that much more tolerable—so I decided to create a space for people to post all of their favorites. I suppose I'm just endlessly entertained by the random links that seem to grab the spotlight: eBay auctions, the amusing Flash animations, wardrobe malfunctions, or singers getting exposed for lip-synching on TV. I created this club with the intent of sharing some of the funniest stuff that gets sent around our office (you should see the stuff the CGW folks find), and in turn I get to see what sort of stuff other folks have happened upon. It's a success, with people supplying killer new links each day. Another similar club that I can't take credit for but must mention is the Useful Video Game Fans Club (http://uvgr.IUP.com). Did you know Nintendo was originally a play arcade company? You could become the world's greatest gaming trivia doc overnight with this club.

What I really did about these clubs is the concept of very one-pitching in for a greater purpose. Even if the greater purpose is just to create more avenues to waste time.

—Sam Kennedy (<http://carnsmail.IUP.com/>)

SCREENSHOT OF THE MONTH

Hey, kids! Fancy yourself a great artiste? Send in your best screenshot from any game you're currently playing, and the best one we receive each month will be printed right here, along with the winner's name. As an example, Blizzard has graciously let us reprint a recent winner of its own Screenshot of the Month contest, which shows players in *World of Warcraft* acting out a scene from the movie *Fight Club*...with gnomes. (Congrats to Grinja of the Garden Gnomes *WOW* guild for the shot.) Send your entry to cgwletters@ziffdavis.com with the subject "Screenshot of the Month." Good luck!

The first rule of Gnome Club: Don't talk about Gnome Club...

Tom vs. Bruce

Two gamers enter, one gamer wins

Le freak, c'est Chique

Bruce: Tom's idea is to play *Sid Meier's Pirates!* like some sort of historical monograph, starting our careers in 1660 at

Swashbuckler level and then comparing our fame scores once we retire. The only thing that I noticed was that for some reason, Tom has chosen to represent France. According to the strictly impartial rules set up by the International War Crimes Tribunal, this means I automatically win.

Chique's First Voyage: The French pirate Chique was renowned for the wit and charm that made him a hit with the daughters of the Caribbean's governors. He sets out from Port-de-Paix in a barque called *The Pissed Civet*, selling luxury goods to French settlements. But on February 22, 1660, his reign of terror begins with an attack on *La Mermaid*, a Spanish sloop carrying gold through the Windward Passage between Cuba and Hispaniola. Next, Chique attacks the English sloop *Adventure*, taking on board her cook (Chique's failing health at a young age would later be attributed to the years at sea spent eating English cuisine). The *Adventure*, equipped with cotton sails and fine-grain gunpowder, is dubbed *The Pissed Civet II* and becomes Chique's flagship.

Bruce: You read all that, right? Good for you. That means you're taking your invest-

ment in this magazine seriously and getting the most out of every paragraph you paid for, no matter how ridiculous. I'm going to be honest and say I never really got past the part where Tom renamed himself Chique. That sounds like the name of some French peacekeeper. Since we're not playing the Abandon Rwanda scenario, I'm not sure why Tom feels it's so important to try and keep the peace. In fact, the computer seems to be a lot better at keeping the peace than the soldiers of that ex-NATO Surrender Factory, since about 15 minutes after I start the game, some inexplicable series of role-playing events makes me end up in prison. Not a real prison, but the even-worse in-game kind, where I have to sit and listen to Tom's nursery rhymes about his Good Ship Lollipop.

Chique's Second Voyage: With the triple hammocks of *The Pissed Civet II* filled to capacity, Chique sets out for the Straits of Florida on April 15, 1661, stopping along the way to dig up 5,000 pieces of gold that had been buried north of Santiago by the French pirate L'Ollonais. Over the course of his career, Chique will make a habit of digging up money left

Chique's fancy footwork impresses the ladies from Nassau to Barbados...

lying around by other pirates

Six months later, having seized a Spanish trade galleon loaded with goods, Chique is pursued into the straits by a pirate hunter out of Havana. Slowed by the captured galleon, he barely escapes by to the French town of Florida Keys. Chique returns to Tortuga, but on the way, his impatient crew mutinies, stealing the trade galleon and her cargo. In the following months, Chique takes on board a navigator and a surgeon and buys a puffy shirt.

Chique's Third Voyage: Chique's ill-fated third voyage begins May 1, 1663, and consists of things such as trying unsuccessfully to attack two brigs at once, sailing

hobbits make him feel
all icky inside.

around without enough money for repairs, and then doing a stint in the Santa Domingo prison. In fact, he'd rather not talk about it if you don't mind.

Chique's Fourth Voyage: In 1664, Chique sets out for the Yucatán to dig up more unattended treasure. On April 9, 1665, after having pocketed 6,000 gold that formerly belong to Stede Bonnet, he encounters Mr. Bonnet, who seems unhappy at having his gold unearthed. Chique grapes and chains Bonnet severely and forces him to surrender his battered ship and another 6,500 gold. But the wheel of fortune turns when Chique is driven off his own ship and forced to take a long, upwind journey in Bonnet's battered brigantine. After two months, the food runs out. On August 8, Chique finally brings the damaged brigantine, now dubbed *The Pissed Civet III*, into Florida Keys. Weak from the long days of deprivation, he still manages to so impress the governor's daughter with his fancy dancing that she gives him a leather vest to complement his puffy shirt.

What follows is a series of successful attacks in the Straits of Florida and the Bahamas that earns him such favor with the English and the French that he's appointed a captain and baron, respectively.

Bruce: Either they don't do a lot of dancing in prison, or the kind of dancing they do isn't simulated by this game. Unfortunately for me, I got a firsthand look at this game-design disaster when I practiced on one of the lower levels. I watched two separate dancing cut-scenes, wondering why my guy was stumbling around like an idiot and if I needed to level up his dexterity and charisma. Turns out they weren't cut-scenes—I was actually supposed to use the arrow keys to make my pirate guy dance around. I put emphasis on that last part in case you are clinically insane and didn't notice the problem yourself.

Chique's Fifth Voyage: On June 1, 1667, Chique leaves Florida Keys to dig up treasure on the northern end of Cuba. On the way he discovers L'Olonais attacking a French ship. Recalling that L'Olonais had called him "dog poo" when he visited the traitorous pirate's haven, Chique intercedes. *The Pissed Civet III* outguns and outmans the brigantine *Blood Debt*. After a careful battle in which Chique loses only 12 men, L'Olonais surrenders at the point of a cutlass. Using the pilfered pirate gold, Chique sails around in his pair of tricked-out brigantines, buying jewelry for governors' daughters, who then join him in courtly dancing. The adoring lasses present him with gifts such as a metal cuirass, a set of balanced swords, and a brace of pistols.

Bruce: Have you been getting the feeling that instead of describing the game, Tom is really fantasizing about himself in the third

Q The ladies love Chique, but he has trouble "sealing the deal" thanks to jealous fiancés.

Q Chique's fleet cruises the Caribbean, bringing fancy jewelry to governors' daughters.

Q Chique's career begins with him hunting trade galleons with a barque, *The Pissed Civet*, and then a sloop, *The Pissed Civet II*.

person, Bob Dole style? Who uses the word "intercedes"? Next he'll be calling himself an "interlocutor" when he talks to "the lasses." I'm almost considering buying up the entire print run of this CGW and tossing it off the Godwin-Austen Glacier, because I am seriously getting the creeps.

Chique's Fifth Voyage, continued:

Chique defeats the pirate Blackbeard in the Bahamas in 1668 and takes his frigate renaming it *The Pissed Civet IV*. In Nassau, he gets a silk shirt and a spyglass and is promoted to an English colonel. In Florida Keys, he gets a fine telescope and is promoted to a French count. He returns to Hispaniola and uses his new frigate to attack Spanish trade galleons, loading their cargo onto his brigantines. The ladies love him, and he continues to shower them with jewelry.

In the summer of 1668, the Spanish capture Leogane, and Chique's crew of 325 men drive them out and restore the French governor. Chique is appointed a marquis for his troubles. Buoyed by his success, he sets out in January of 1669 to take Santiago itself. But his crew will have none of it, and 40 men desert him when he sets out. Further discouraged by losing duels to three rivals for the affections of various governors' daughters (in spite of his fancy shirt, cuirass, swords, and pistols), Chique decides to disband.

Chique's Sixth Voyage: On November 22, 1669, Chique loses another duel with a rival, fiancé in Tortuga. Bitterly disappointed at his inability to woo beautiful women, he resolves to instead hunt down the villains Raymondo and Montalban, who are cower-

ing in cities along the Spanish Main. On the way, he visits the Lesser Antilles to try his luck with the English women. Even though he secures a three-stringed fiddle from a woman in Montserrat, Chique's crew grows impatient. Despite (or perhaps because of) Chique's rendition of various pirate tunes on the fiddle, the crew begins deserting.

Chique's Seventh Voyage: Chique sets sail for Curaçao in the summer of 1671, only to find out that the Dutch, who have a peace treaty with Spain, won't let him in. With no place to sell his plundered Spanish goods, he returns to the Lesser Antilles. In February of 1672, he sets out again, determined not to slow himself down with any Spanish booty. However, the crew is restless at the lack of booty action, and morale sags despite the fine English food and the three-stringed fiddling.

When he finally finds and defeats Raymondo in August, he uncovers only a useless shred of a map that reveals that his sister is held captive somewhere near a geyser. With a badly battered prize ship and no friendly port in sight to sell plundered goods, Chique decides to use his 190 men to capture Nombre de Dios and hand it over to France. From this new French port, he heads west to fight Montalban in Santa Catalina, only to be driven off his beloved frigate and rescued by a sloop (*The Pissed Civet V*).

From here, Chique sets out to follow a map to a lost Inca city that he got from some girl he danced with. On April 30, 1673, he rounds the northern tip of the Yucatán. But in a sudden turn of bad luck, □

❑ I know he looks like a fop, my daughter, but please marry him! He has lots of money and season tickets to the Oakland A's!

❑ After taking a grain transport to stock up on food, a pirate hunter from Campeche sinks *The Pissed Civet V*, along with all of Chique's pirate goodies and over 11,000 in gold.

Bruce: civet (s'V'-t; -t; 119) n. [F. *civette*, fr. It. *zibetto*, fr. Ar. *zabad* Cf. *zibet*] 1. A substance of the consistency of butter or honey, found in a pouch near the sexual organs of the true civet cats. It is of a clear yellowish or brownish color, of a strong musky odor. It is used as a perfume.

Chique's Seventh Voyage, continued: A year later, Chique is rescued. Determined more than ever to find the lost Inca city, he sets ashore at various points along the Yucatán looking for two deserted cabins side by side. On October 6, 1674, he discovers the lost Inca city, which is fine and all but isn't nearly as impressive as the 50,000 pieces of gold the Incas left inside.

Returning to the familiar waters of the Antilles, Chique continues to lose two duels with jealous fiancés. He finally finds medicinal herbs in Antigua in 1675, but in a perhaps related incident, he tries to take a shortcut between the coast of Cuba and a sandbar at a landmark appropriately called Rum Point. What follows is four months of spinning his ship around trying to extricate it, only to emerge with his crew starved and demoralized by Chique's inability to not bump into Cuba. *The Pissed Civet VII*, a captured Spanish royal sloop, then falls prey to a pirate hunter leaving Chique far upwind of Hispaniola in a battered trade galleon. It takes eight months to reach Petit Goave, where Chique is promptly raped by a jealous fiancé. Chique is 34 years old, in failing health, harangued by his mutinous crew, and now the captain of a trade galleon. A frickin' trade galleon. But he is also wildly rich with Inca gold that brings his share for this voyage to 24,111 pieces of gold.

Chique's Eighth Voyage: Chique sets out on July 12, 1677, in his trade galleon. He

spends the next two years trying to get a better ship and is imprisoned three times before ending up with a crappy little sloop, which becomes *The Pissed Civet VIII*, and a crew that's really put out with him.

Chique's Ninth Voyage: Having won the heart—and beat the fiancé—of a rather plain girl in Tortuga, Chique sets out on May 27, 1680, to rescue her from the kidnapper Mendoza, who has carried her away to Gibraltar. However, on the way south, he is marooned for a year after losing a battle to Raymondo. Chique is rescued and then works his way along the Lesser Antilles down to the Spanish Main with a newly happy crew.

Bruce: I've been expecting that at some point Tom would drop the whole swash-buckling role-playing game schtick and admit this is really just another case of him getting excited over *Shadow Watch* or *Flying Heroes*. Instead, the whole thing keeps getting scarier. How does he know

the crew members were happy? This is sounding a lot like *Pirates!* fan fiction. Or slash fiction. Whatever that is, because I actually have no idea.

Chique's Ninth Voyage, continued:

Chique captures a sloop of war from Bart Roberts, which becomes *The Pissed Civet IX*, and resumes the quest to find Mendoza. On November 20, 1682, Chique finds and attacks Mendoza's war galleon and is driven overboard in a sword fight. He's rescued by his backup sloop, *The Pissed Civet X*. The next day, Chique carefully weaves off the galleon's bow, firing chain and grape until there are only 18 men aboard. He boards the galleon, rescues his fiancée, and heads north to return her to Tortuga.

Bruce: Men-do-zaaaaa! Sorry, is this over yet?

Chique's Ninth Voyage, continued:

Chique finally arrives in Tortuga April 3, 1684, and is married, even though she's "rather plain" (at age 42, Chique figures he'll take what he can get). He spends his waning years sinking Spanish ships, occasionally bringing jewelry to mistresses in the Lesser Antilles, and half-meaning to get back down to the Spanish Main to rescue his sister "one of these days." But he does no such thing and instead retires at the age of 43, taking on the profession of a magistrate in Tortuga with nearly 56,732 gold and 6,250 acres of land. His fame is 63.

Bruce: That was nice, wasn't it?

Unfortunately for Tom, like I mentioned at the beginning, the precedent set by the ongoing Milosevic trial clearly states that if you choose France, you lose. So I thank him for the entertaining game and somewhat less entertaining commentary, but the only use I can really think of for it would be to fashion some of those pop-up cutouts of pirate ships and make the whole thing into a kids' book. Bottom line: Bruce 1, Tom 0. Thanks and good night. ☹

❑ Chique retires at the age of 43 as a magistrate in Tortuga with a fame of 63.

❑ Bruce retires at the age of 31 as a pickpocket in San Juan with a fame of 0.

No peace to know peace

It's not like I'm the sort of guy who lassos a coil of rusted razor wire around the throat of the self-important half-wit sitting behind me on the commuter train, slapping the back of my reclining head as I try to nap as he gestures to invisible cohorts while blabbering into the hands-free Bluetooth cell phone ear-piece that makes him look like an extra-pasty Borg. I only *think* it. I only think about clinching that razor wire tight and whipping it through his Adam's apple until he's gargling his own blood to Mitzi in accounts payable and then his ego-swollen head hits the train floor and a great "Huzzah!" rings out from my grateful fellow commuters and we play lacrosse with his softening noggin in elated celebration until the train hits our stop and we saunter off, slicked with junior sales account executive blood and whistling a merry tune. There's a big difference.

Still, there are those who would make the argument that this implies I need to, in a word, chill.

OK, point taken. I've got a hectic work schedule, two unruly kids, and a wife who has left a butter knife welded to the kitchen counter with grape jelly every single morning for seven years. Maybe if I could just relax a bit, those projectile nosebleeds would lessen in frequency, if not trajectory. Maybe I could stop sweating urine and actually use a restroom like a normal guy. Maybe, just maybe, I could know inner peace. With this in mind, I loaded *The Journey to the Wild Divine* onto my computer. What a mistake.

Wild Divine seems to have been created for that huge market of nitwits still mourning the nonoccurrence of the Harmonic Convergence nearly two decades ago. It comes in a big *World of Warcraft Collector's Edition*-sized box, the better to hold the Mac and PC installation CDs, the *Wild Divine* manual, the companion guide, a CD full of that nerve-shredding wind chime and synthesizer noodling garbage desperate divorcees with bad perms seem to like—and a USB biofeedback device. This chunk of blue plastic, excuse me, this Light Stone Energy Translator attaches to three of your fingers courtesy of three snap-on sensors, excuse me, snap-on Magic Rings. Through the Light Stone, plus a few mouse clicks, you interact with the game world of *Wild Divine*.

And oh, what a world it is. Bad full-motion video of overly necklaced old ladies in bathrobes slapped onto a backdrop apparently drawn by a withdrawn, unicorn-fixated high school girl. It's an absolutely insane—and by insane I do not mean "intense and

ILLUSTRATION BY JON WARD

Are there cheat codes for personal bliss? Not on gamefaqs.com there aren't.

cool" but "crazy and disturbed"—mix of vaguely Eastern architecture, black felt gardenscapes, greeting card highlights circa 1978, and random gazebos.

Granted, it didn't make the best first impression on me, but I was going to stay the course. If all that stood between me and the self-discovery promised courtesy of this game's Cosmic Yoga was the petrified forest of my own cynicism, then I was going to find my way out through that dark and stony wood to the salvation just beyond its frigid borders. So I stuck through the "energy juggling" and "breath of peace" drills of the tutorial and climbed my way through the garish world as the game proper commenced.

Every so often, a fat FMV dog sparkling with, I don't know, pixilated peace and serenity dust I guess, would waddle by as I crawled with pre-Myst excruciating slowness through the Sun Realm. Climbing a vine-choked staircase, I passed some sparkling llamas (which, incidentally, is the name of my new band—"Hello, Barstow, we're Sparkling Llamas and we're here to rock!") before reaching the summit where Mr. Miyagi challenged me to make some balloons float past a window by calming the hell down. And before you knew it, it was over.

I stumbled into the Lady of the Wood's abode and she instructed me to use my breath of peace to start a fire with the near-

by bellows (actually, she said "belows," thus implying I'd be breathing for some "aboves" later, but whatever), and then the game came to a screeching halt. I, incidentally, was doing all the screeching. Because, try as I might, I could not breathe in exactly the right way to get that fire started. I could make those stupid balloons float, I could aim a bow with my inner calm, but inhaling and exhaling along with the bellows in precisely the exact way it wanted me to was impossible. The fire never started—though it almost did once when I literally nodded off while "playing"—so I could never get the magic bag from the Lady of the Wood. While most games would have the decency to give me a flamethrower, this \$125 monstrosity gave me angina. So I did what I do whenever a game drives me insane: I went online.

Are there cheat codes for personal bliss? Not on www.gamefaqs.com there aren't. There was no way to jump past the fire and get further along my personal path to nirvana. I tore the Magic Rings from my digits, hurled the Light Stone back into the box, and did the only sensible thing—I started up *Painkiller* and shredded my way through a few hundred monsters just begging to be minced into bloody chunks.

And it was then that I knew peace.
